Preamble

To meet the challenge of ensuring excellence and NEP 2020 policy in engineering education, the issue of quality needs to be addressed, debated, and taken forward systematically. Accreditation is the principal means of quality assurance in higher education. The major emphasis of the accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Science and Technology (in particular Engineering) of the University of Mumbai has taken the lead in incorporating the philosophy of NEP 2020 education in the process of curriculum development.

The second-year engineering course is a core training program to impart scientific and logical thinking training to learners in general, with a choice of course selection from the program core course, multidisciplinary minor, and vocational skill-enhanced course. Simultaneously, the objectives of NEP 2020 demand nurturing the core program and skills required for the Information Technology Branch of engineering in the learner. Keeping this in view, a pool of courses is offered in Core Courses covering fundamentals required to understand core and modern engineering practices and emerging trends in technology. Considering the shift in pedagogy and the convenience of a stress-free learning process, a choice-based subject pool is offered in the coursework under the heads of Information Technology in Engineering for open electives and multidisciplinary minor courses in the third and fourth semesters. Essentially, to give a glimpse of trends in the industry under vocational and enhanced skill practices, the pool is offered to nurture and develop creative skills in contemporary industrial practices. Criteria met in the structure is the opportunity for learners to choose the course of their interest in all disciplines.

Program Core Course Cover Electronics Engineering core courses. Also, OE and MDM where a pool of subjects are given for selection. Considering the present scenario, diverse choices need to be made available to fulfill the expectation of a learner to aspire for a career in the field of current trends of Technology and interdisciplinary research. Ability enhancement can be achieved in Undergraduate training by giving an objective viewpoint to the learning process and transitioning a learner from a rote learner to a creative professional. for the purpose Design Thinking is introduced in the First Semester to orient a journey learner to become a skilled professional. Considering the NEP-2020 structure of award of Certificate & Diploma at multiple exit-point pools of Vocational skills is arranged for giving exposure to the current Industry practices.

The faculty resolved that course objectives and course outcomes are to be clearly defined for every course so that all faculty members in affiliated higher education institutes understand the depth and approach of the course to be taught, which will enhance the learner selarning process. NEP 2020 grading system enables a much-required shift in focus from teacher-centric to continuous-based learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation, which will enhance the quality of education. Credit assignment for courses is based on a 15-week teaching-learning process for NEP 2020, however, the content of courses is to be taught in 12-13 weeks, and the remaining 2-3 weeks are to be utilized for revision, tutorial, guest lectures, coverage of content beyond the syllabus, etc.

There was a concern that in the present system, the second-year syllabus must not be heavily loaded to the learner and it is of utmost importance that the learner entering into the second year of an engineering course should feel at ease by lowering the burden of syllabus and credits. This is necessary for a learner to get accustomed to the new environment of a college and to create a bond between the teacher and the learner. The present curriculum will be implemented for the Second Year of Engineering from the academic year 2054-26. Subsequently, this system will be carried forward for Third Year and Final Year Engineering in the academic years 2026-27, and 2027-28, respectively.

Course Objectives:

- 1. To build a strong foundation in mathematics, provide students with the mathematics fundamentals necessary to formulate, solve and analyse complex engineering problems.
- 2. To prepare the students to apply reasoning informed by contextual knowledge to engineering practice, and to work as part of teams on multi-disciplinary projects.

Pre-requisite Course Codes	BSC10	1-Applied Mathematics-I, BSC102-Applied Mathematics-II								
	After tl	After the successful completion, students should be able to								
Course Outcomes	CO1	Understand the concept of Laplace transform and its application to solve the real integrals in engineering								
		problems.								
	CO2	Understand the concept of inverse Laplace transform of various functions and its applications in engineering problems.								
	CO3	Expand the periodic function by using Fourier series for real life problems and complex engineering problems.								
	CO4	Apply the concept of vector spaces and orthogonalization process in Engineering Problems								
	CO5	Apply the concepts Linear transformations in image processing.								
	CO6	Apply the concepts of Eigen values and Eigen vectors to concepts of PCA and image processing.								

Module No.	Topics	Refere nces	No. of Hou rs
01	 Laplace Transforms: 1.1 Definition of Laplace transform, Condition of Existence of Laplace transform. 1.2 Laplace Transform (L) of Standard Functions like e^{at}, sin(at), cos(at), sinh(at), cosh(at) and tⁿ, n ≥ 0. 1.3 Properties of Laplace Transform: Linearity, First Shifting theorem, change of scale Property, multiplication by t, Division by t, Laplace Transform of derivatives and integrals (Properties without proof). 1.4 Feedbacking of integrals have in Laplace Transformed integrals (Properties without proof). 	[1], [3]	5
02	Inverse Laplace Transform: 2.1 Inverse Laplace Transform, Linearity property, use of standard formulae tofind inverse Laplace Transform, finding Inverse Laplace transform using derivatives. 2.2 Partial fractions method to find inverse Laplace transform. 2.3 Inverse Laplace transform using Convolution theorem (without proof).	[1], [3]	4
03	Fourier Series: 3.1 Dirichlet"s conditions, Definition of Fourier series and Parseval"s Identity (without proof). 3.2 Fourier Series on interval (c, c+21). 3.3 Half range Sine and Cosine Series.	[1], [3]	5
04	Vectors spaces: 4.1 Vectors spaces in N dimensional, Finite dimensional Vector spaces, Linear Span, Basis, dimension, Subspace, Cauchy Schwartz Inequality 4.2 Inner Product spaces, Norm, Orthogonal Vectors, Orthogonal Projection and Orthogonal Complements, Gram Schmidt Orthogonalization Process	[2], [4]	4
05	Linear Transformation: 5.1 Linear Transformation, types of linear operators (Reflection Projection, Rotation, Contraction, Dialtion, shear), Kernel & Range of Linear Transformation, Rank Nullity Theorem (without proof) 5.2 Matrix of a linear Transformation, Composition of Liner Transformation and Inverse of liner transformation 5.3. Effect of Change of Bases on Linear Operators	[2], [4]	4
06	Matrix: Eigen values & Eigen vectors: 6.1 Characteristic equation, Eigen values and Eigen vectors, Example based on properties of Eigen values and Eigen vectors. (Without Proof). 6.2. Similarity of Matrices, Diagonalization of Matrices and Functions of Square matrices	[2], [4]	4
		i i

Module No.	Unit No.	Topics	Reference	Hrs.
Module	1		6Hrs	
1	1.1	Theoretical description of basic structure & construction of p n junction diode, symbol, operation under zero bias, forward bias & reverse bias, avalanche breakdown, V-I characteristics & temperature effects (no mathematical analysis or numerical examples).	1,2	
•	1.2	Application of P-N junction diode as clippers & clampers (different types of configurations with input-output waveforms & transfer characteristics; theoretical description & analysis of each circuit; numerical examples)		
Module	2	Rectifiers & Filters		6Hrs
2	2.1	Rectifiers: Working & mathematical analysis of full – wave center tapped rectifier & bridge type rectifier (mathematical analysis include expressions for the DC / average & RMS output voltage, DC / average & RMS output current & ripple factor; numerical examples included)	1,2	
	2.2	Filters: Capacitor (C), Inductor (L), Inductor – Capacitor (LC), C-L-C (π) with circuit diagram, waveforms, working / operation & expression for ripple factor (theoretical description only – no analysis or numerical examples to be included)		

Module	3	Bipolar Junction Transistor Based Circuits	1,2 3, 4	8	
3	3.1	DC Circuit Analysis: DC load line and region of operation, common bipolar transistor configurations, biasing circuits, bias stability and compensation, analysis and design of biasing circuits.		Hrs	
	3.2	AC Analysis of BJT Amplifiers: AC load line, small signal models (h-parameter model, Hybrid-pi model), graphical analysis, ac equivalent circuits and analysis to obtain voltage gain, current gain, input impedance, output impedance of CE, CB and CC amplifiers.	4		
	3.3	Design of CE Amplifier		7	
Module 4	4	MOSFET Based Circuits		8 Hrs	
7	4.1	DC Circuit Analysis: DC load line and region of operation, common-MOSFETs configurations, analysis and design of biasing circuits	1,2 ,3,4	1113	
	4.2	AC Analysis: AC load line, small-signal model of MOSFET at high and low frequency and its equivalent circuit, small-signal analysis of MOSFET amplifiers, common-source, source follower, common gate.			
	4.3	Design of CS Amplifier using MOSFETS			
Module	5	Power Amplifier		5Hrs	
5	5.1	Introduction to power amplifiers, difference between voltage and power amplifiers.	2,5,6,7		
	5.2	Classification of Class A, Class-B, Class-AB, Class-C power amplifiers, power amplifier using MOSFET			
Module	6	Power Electronic Devices		6Hrs	
6	6.1	Introduction to power electronic devices and its needs.	9,10		
	6.2 Introduction, scope and application, construction and characteristics of thyristors, power MOSFET, IGBT, IGCT and GTO,				
	6.3	Applications of power electronic devices			
			Total	39	

Course Assessment:

Pre-requisite Course Codes	C Prog	gramming (VSEC102)								
Course Objectives	1. To u	1. To understand basic linear and non-linear data structures.								
	2. To i	2. To implement various operations on Arrays, linked list, stack,								
		binary tree, and graph.								
		tudy different sorting and searching techniques.								
	4. To a	nalyze efficient data structures to solve real world problems.								
	After th	he successful completion students should be able to								
Course Outcomes	CO1	O1 Implement various linear data structures.								
	CO2	CO2 Implement various nonlinear data structures.								
	CO3	Perform operations on data structures								
	CO4	Analyze appropriate sorting and searching techniques for a given problem.								
	CO5	Develop solutions for real world problems by selecting appropriate data structure and algorithms.								
	CO6	CO6 Analyze the complexity of the given algorithms.								

Module No.	Unit No.	Topics	Refer ence	Hrs	
1	1 Introduction to Data Structures and Algorithms				
	1.1	Introduction to Data Structures, Types of Data Structures – Linear and Nonlinear, Operations on Data Structures.			
	1.2 Introduction to Analysis of Algorithms, characteristics of algorithms, Time and Space complexities, Asymptotic notations.				
2		Stack and Queues	1,2,3,	5	
	2.1	Introduction, Basic Stack Operations, Representation of a Stack using Array, Applications of Stack: Infix to Postfix Conversion and Postfix Evaluation.	74		
	2.2 Queue, Operations on Queue, types of queues.				
3	Linked List		3,5,7,	5	
		Introduction, Representation of Linked List, Linked List v/s Array, Types of Linked List - Singly Linked List, Doubly Linked List and	9		

		Circular Linked List, Operations on Singly Linked List. Implementation of Stack and Queue using Singly Linked List.		
4		Trees	3, 5, 6, 8	5
	4.1	Introduction, Tree Terminologies, Binary Tree, Types of Binary Tree, Representation of Binary Trees, Binary Tree Traversals, Binary Search Tree, Operations on Binary Search Tree, Applications of Binary Tree- Huffman Encoding.	0, 8	
5	5 Graphs		3, 5,	3
	5.1	Introduction, Graph Terminologies, Representation of graph (Adjacency matrix and adjacency list), Graph Traversals – Depth First Search (DFS) and Breadth First Search (BFS), Application – Topological Sorting.	6, 8	
6		Introduction to Sorting and Searching	3, 5,	5
	6.1	Introduction to Searching: Linear search, Binary search Sorting Techniques: Bubble, Insertion, selection, Quick Sort, Merge Sort, Comparison of sorting Techniques.	6, 8	
	6.2	Hashing Techniques, Different Hash functions, Collision & Collision resolution techniques: Linear and Quadratic probing.

Pre-requisite Course Codes	ESL 1	02 BEEE Lab, BSL2012 Semiconductor Physics Lab
Codes	1.	To deliver a hands-on approach for studying electronic devices
	2	To comprehend characteristics of electronic devices; thereby understanding their behavior
Laboratory Objectives	3.	To analyze & calculate inherent parameters of electronic devices through experimental approach
	4.	To introduce modern software simulation tools for modeling & simulation of electronic devices
	After t	he successful completion students should be able to
	LO1	Understand and analyze the operation of clippers and clampers in shaping and modifying waveforms.
	LO2	Simulate basic electronic circuits through software simulation
Laboratory Outcomes	LO3	Analyze electronic circuits using BJT and FET (DC & AC analysis)
	LO4	Verify the performance of the designed amplifier through theoretical analysis, simulation, and practical implementation
	LO 5	Study of static characteristic of power devices through software simulation

Laboratory Experiments:

Sr. No.	Title of experiment	Hardware /Software	Mod ule	Refer ence	
1.	To perform Clippers and Clampers.	Hardware	1	oftv	vare
2.	To perform Full wave/Bridge rectifier with LC/pi filter.	Hardware	2		
3. 4.	SPICE simulation of Full wave/Bridge rectifier with LC/pi filter. Compare different Biasing Circuits of BJT	Software Hardware/S	3		

1,3 1,3

		1		
5.	To perform AC, DC, Transient and frequency response of single stage CE amplifiers.	Hardware/S oftware	3	1,2,3

Laboratory Assessment:

Assessment:

Term Work: Term Work shall consist of at least 10 to 12 practicals based on the above list. Also, Term work Journal must include at least 2 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical/ Oral Exam: An Oral examination will be held based on the above syllabus.

Recommended Books:

- [1] David A Bell, "Laboratory Manual for Electronic Devices and Circuits", 4th edition, PHI, 2001.
- [2] Muhammed H Rashid, "SPICE for circuits and electronics using PSPICE", 2nd edition, PHI, 1995
- [3] Mithal. G.K, "Practicals in Basic Electronics", G K Publishers Private Limited, 1997.

Term Work:

At least 10 experiments covering the entire syllabus of PCL 302 (Electronic Devices and circuits Lab) should be set to have well predefined inference and conclusion. This must include 50% Hardware and 50% Simulation experiments. The experiments should be student centric and attempts should be made to make the experiments meaningful and interesting. Experiments must be graded from time to time. The grades should be converted into marks as per the Credit and Grading System manual and should be added and averaged. The grading and term work assessment should be done based on this scheme. The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work. Practical and Oral exam will be based on the entire syllabus.

Note:

Suggested List of Experiments is indicative. However, flexibility lies with individual course instructors to design and introduce new, innovative and challenging experiments, (limited to maximum 30% variation to the suggested list) from within the curriculum, so that the fundamentals and applications can be explored to give greater clarity to the students and they can be motivated to think differently.

Pre-requisite Course Codes	ESC10	2: Basic Electrical & Electronics Engineering
	1.	To analyze and solve electrical networks using nodal, mesh analysis and network theorems.
Laboratory Objectives	2	To develop an ability to apply various methods of analysis of electrical circuits under transient and steady state conditions.
	3.	To design and implement simple electrical networks using synthesis techniques.
	After th	ne successful completion students should be able to
	LO 1	Apply basic concepts of electrical networks for analyzing DC Networks and theorems
	LO 2	Apply knowledge of various parameters to synthesize filter circuits
Laboratory Outcomes	LO 3	Apply knowledge of first order and second order system to solve time domain analysis of RLC circuits
	LO 4	Synthesize RLC circuits using frequency domain analysis
	LO 5	Evaluate various parameters of two port networks
	LO 6	Analyze the stability criteria and synthesize RC, RL & LC circuits

Laboratory Experiments:

Sr. No.	Title of experiment	Module	Refe renc e
1.	Simulation of Nodal Analysis for DC Circuits / To verify Maximum Power Transfer Theorem.	1	
2.	Simulation of DC Circuit for determining Thevenin's Equivalent / To verify Thevenin"s and Norton"s Theorem.	1	_
3.	To design Low pass, high pass, band pass and band stop filters and evaluate various parameters.	2	
4.	To plot the step response of the first order system and observe the effect of changing time constant in the first order system. (SCILAB / MATLAB)	3	
5.	To plot the step response of the second order system and evaluate time domain specifications. (SCILAB / MATLAB)	3	
6.	Simulation of R-L-C series Circuit.	4	

7.	To find pole zero plot of given transfer functions. (SCILAB / MATLAB)	5	
8.	Determination of Z and Y parameters of two port network	5	
9.	To determine the stability of a given system using Routh"s criteria. (SCILAB / MATLAB)	6	
10.	Verification of Maximum Power Transfer Theorem (Virtual Laboratory): https://asnm-iitkgp.vlabs.ac.in/exp/maximum-power-transfer-theorem/	1	
11.	To study the behaviour of a series R-L-C circuit (Virtual Laboratory): https://asnm-iitkgp.vlabs.ac.in/exp/rlc-circuit-analysis/index.html	3	
12.	Experimental verification of frequency response of R-L-C series Circuit (Virtual Laboratory): https://asnm-iitkgp.vlabs.ac.in/exp/rlc-series-circuit/index.html	4	
13.	To determine Y, Z, h and ABCD parameters of single and cascaded two-Port networks experimentally and verify their interrelationships (Virtual Laboratory): https://asnm-iitkgp.vlabs.ac.in/exp/two-port-network/	5	

<u>Please Note:</u> The list of experiments is merely meant to serve as a guide and is not limited to, the instructors are free to add innovative and creative lab experiments, and the use of open-source software, simulation platforms, and virtual laboratories is encouraged.

Laboratory Assessment:

Assessment:

Term Work: Term Work shall consist of at least 8 practicals" based on the above list and not limited to. Also, Term work Journal must include at least 2 assignments or 2 Virtual Laboratories or 1 Mini Project / 1 Circuit development on the topics from the subject.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments / Virtual Laboratory / Mini Project / Circuit development on the topics from the subject) + 5 Marks (Attendance)

Practical/ Oral Exam: An Practical examination will be held based on the above syllabus.

Course Objectives:

- 1. To build a strong foundation in mathematics, provide students with the mathematics fundamentals necessary to formulate, solve and analyse complex engineering problems.
- 2. To prepare the students to apply reasoning informed by contextual knowledge to engineering practice, and to work as part of teams on multi-disciplinary projects.

Pre-requisite	BSC101-Applied Mathematics-I, BSC102-Applied Mathematics-II				
Course Codes					
	After	the successful completion, students should be able to			
Course	CO1 Find eigenvalues and eigenvectors of the matrix, apply Caley Hamilt				
Outcomes		theorem, find a matrix function, and distinguish derogatory and diagonalizable matrices.			
	CO2	Reduce a quadratic form to canonical forms using congruent and orthogonal transformations and characterize it based on rank, index and class value.			
	Identify vector spaces and their bases, calculate the norm and inner products, prove the associated properties, and find an orthogonal and orthonormal basis using the Gram-Schmidt process.				
	CO4	Compute probability using probability distribution of discrete and continuous random variables, Binomial, Poisson, and Normal distributions.			
CO5 Apply testing of the hypothesis associated with the distribution of large samples, small samples and chi-square					
	CO6	Apply the concept of correlation and regression, fitting the curve to estimate the parameters for a given data set.			

Module No.	Topics	References	No. of Hours	
01	 Linear Algebra (Theory of Matrices): 1. Eigenvalues and eigenvectors and properties. 1.2 Cayley-Hamilton Theorem (without proof), Functions of Square Matrix. 1.3 Derogatory and non-derogatory matrices. 1.4 Similarity of matrices, diagonalizable and non-diagonalizable matrices. 	[1], [3]	4	
02	Linear Algebra (Quadratic Forms): 2.1 Quadratic forms over the real field, the linear transformation of quadratic form, reduction of quadratic form to canonical forms (diagonal and normal) using a congruent transformation. 2.2 Rank, index and signature of a quadratic form, Sylvester"s law of inertia, value-class of a quadratic form-Definite, Semi-definite and Indefinite.	[1], [3]	4	

	2.3 Reduction of quadratic form to canonical forms (diagonal and		
	normal) using an orthogonal transformation.		
03	 Linear Algebra (Vector Space, Basis and Orthonormal Basis): 2.1 Vector spaces over real field, subspaces. 2.2 Vectors in n-dimensional vector space, linear combinations, linear dependence and independence set of vectors, basis of a vector space. 2.3 Norm, inner product, distance between two vectors, angle between two vectors, orthogonal vectors, triangular and Cauchy-Schwarz inequality. 2.4 Orthogonal and orthonormal bases, Gram-Schmidt process to construct an orthonormal basis. 	[1], [3]	4
04	 Probability: 4.1 Discrete and continuous random variable with a probability distribution and density function. 4.2 Expectation, variance, moment generating function, raw and central moments, covariance, correlation coefficient and their properties. 4.4 Probability distribution: Binomial, Poisson and Normal distributions. 	[2], [4]	5
05	 Probability Distribution and Sampling Theory: 5.1 Sampling distribution, test of hypothesis, level of significance, critical region, one-tailed and two-tailed test, test of significance of mean and difference between the means of two samples for large samples. 5.2 Degree of freedom, Student"s t-distribution, test of significance of mean and difference between the means of two samples for small samples. 5.3 Chi-Square Test: Test of goodness of fit, contingency table and test of independence of attributes, Yate"s correction. 	[2], [4]	5
06	Statistical Techniques: 6.1 Karl Pearson's coefficient of correlation. 6.2 Spearman's rank correlation coefficient (with repeated and non-repeated ranks). 6.3 Fitting of first and second degree curves. 6.4 Linear regression.	[2], [4]	4
	Total		26

Course Assessment:

Theory:

<u>IA1:</u> 20 Marks written one-hour examination should be conducted when approximately 40% of the syllabus is completed.

<u>IA2:</u> 20 Marks written one-hour examination should be conducted when approximately 80% of the syllabus is completed.

ESE: 60 Marks written two-hour examination should be conducted based on 100% of the syllabus.

End Semester Theory Examination:

- 1 Question paper will be worth 60 marks.
- 2 Question paper will have a total of five questions.
- 3 All questions have equal weightage and carry 20 marks each.
- 4 Any three questions out of five need to be solved.

Pre-requisite Course Codes	Electro	onic Devices Laboratory
	1.	To practically analyze& compute performance parameters of various electronic circuits
Laboratory Objectives	2	To familiarize with principles of designing of practical electronic circuits as per given specifications
	3.	To develop overall approach for students from selection of integrated circuit, specification, functionality and applications
	After th	ne successful completion students should be able to
	LO 1	Experimentally evaluate performance of amplifiers through frequency response
Laboratory Outcomes	LO 2	Analyze differential amplifiers for various performance parameters
	LO 3	Implement practically various applications and circuits based on operational amplifiers.

Laboratory Experiments:

Sr. No.	Title of experiment	Module	Reference
1.	To implement single stage MOSFET CS amplifier and study its frequency response	1	R1, R3
2.	To implement CS-CG MOSFET Cascode amplifier and study its frequency response.	1	R1, R3
3.	To determine input and output impedance of CS amplifier with and without feedback.	1	R1, R3
4.	To study Op-amp as Differential amplifier.	2	R1, R7
5.	To measure parameters of Op-amp.	2	R1, R7
6.	To study Inverting and Non-inverting configuration of Op-amp.	3	R7
7.	To study and calculate frequency of oscillations of Wien bridge oscillator	4	R2, R4
8.	To study and calculate frequency of oscillations of RC Phase shift oscillator	4	R2, R4

9.	To study voltage gain of three Op-amp instrumentation amplifier	5	R2, R7
10.	To study the operational amplifier as summing amplifier.	5	R2, R7
11.	To determine upper and lower threshold voltage in Schmitt trigger using IC 741.	6	R2, R4, R7
12.	To study and implement Astable multi-vibrator using 555 timer IC.	6	R2, R7
13.	To study Op-amp as comparator and zero crossing detector	6	R2, R4, R7

Laboratory Assessment:

Assessment:

Term Work: Term Work shall consist of at least 10 to 12 practical"s based on the above list. Also, Termwork Journal must include at least 2 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks(Attendance)

Practical/ Oral Exam: An Oral examination will be held based on the above syllabus.

Pre-requisite	Course C	odes: Python programming
	1.	To familiarize learners with Python's basic syntax, variables, data types, operators, and input/output functions.
Laboratory Objectives	2	To introduce learners with file handling, exception management, and Python packaging.
	3.	To reinforce the understanding and application of GUI.
	4	To explore advanced libraries such as Numpy, Pandas, Matplotlib, Seaborn, Scipy.
	5	To explore data visualization tools.
	6	To introduce and demonstrate the use of DJANGO for web applications.
	After the	e successful completion students should be able to
	LO 1	Identify the fundamental Python programming to design object- oriented programs with Python classes
Laboratory Outcomes	LO 2	Demonstrate the file handling operations like reading, writing to create the programs
	LO 3	Express proficiency in the handling Python libraries to Design GUI Applications
	LO 4	Design interactive visualizations that allow users to explore data creatively
	LO 5	Develop interactive projects with the help of Machine learning libraries to develop different applications
	LO 6	Create the web development applications with the help of DJANGO.

Module No. 1	Unit No.	Introduction to Creative Coding with Python	Ref ere nce	Hrs.
		Python Programming Basics	R1	04
	1.1	Basic Syntax and Data Types - Variables and data types, Operators, Input and output, Data Structures- list, tuple, set and dictionary Understanding the Syntax Transition: From C to Python	1	
	1.2	Conditional Statements: if, else, elif, Loops: for and while loop Functions- Defining functions, Parameters and return values, Scope and lifetime of variables.		
2		Functions, File I/O Handling and Classes	R1,	04
	2.1	File Input/Output: Files I/O operations, Read / Write Operations, File Opening Modes, with keywords, Moving within a file, Manipulating files and directories, OS and SYS modules	R2	•
	2.2	Classes and Objects, Public and Private Members, Class Declaration and Object Creation, Object Initialization, Class Variables and methods, Accessing Object and Class Attributes. Intricacies of Classes and Objects, Inheritance, Constructor in Inheritance, Exception Handling, Link list, Stack, Queues.		
3		Graphical User Interface and Image processing	R3	06
3	3.1	Graphical User Interface using Tkinter Library module, creating simple GUI; Buttons, Labels, entry fields, widget attributes. Database: Sqilite database connection, Create, append,		00
	3.3	update, delete records from database using GUI. Basic Image Processing using OpenCV library, simple image manipulation using image module.		
4		Numpy, Pandas, Matplotlib, Seaborn, Scipy and Data Science	R3, R4	08
	4.1	Introduction to Numpy, Creating and Printing Ndarray, Class and Attributes of Ndarray, Basic operation, Copy and view, Mathematical Functions of Numpy		
	4.2	Introduction to Pandas, Understanding Dataframe, View and Select Data, Missing Values, Data Operations, File read and write operation.		
	4.3	Introduction to Matplotlib library, Line properties, Plots and subplots, Types of Plots, Introduction to Seaborn		
	4.4	Introduction to Scipy, Scipy Sub packages – Integration and Optimization, Eigen values and Eigen Vectors, Statistic, Weave and IO.		
	4.5	Dataframes, Data analysis commands, Data visualization: Line chart, Bar Diagram, Histogram, Pie chart		
5		Web Development	R3, R4,	04
	5.1	Introduction to web development application, Web Architecture and applications.	R5	
	5.2	Introduction to DJANGO Framework: History of DJANGO, DJANGO-Design philosophies, DJANGO features and Environment set up.

Laboratory Experiments:

The following experiments serve as samples to illustrate the application of concepts covered in each unit. Instructors are encouraged to modify and adapt these experiments to meet the specific needs of the course and the learning objectives. It is essential to ensure that the fundamental concepts and skills outlined in each unit are adequately covered, even with modifications

Sr. No.	Title of experiment	Module	Refere nce
1.	 Write python programs to understand expressions, variables, quotes, basic math operations, list, tuples, dictionaries, arrays etc. Write Python program to implement byte array, range, set and different STRING Functions (len, count, lower, sorted etc) Write a Python program to implement control structures. Assume a suitable value for distance between two cities (in km). Write a program to convert and print this distance in meters, feet, inches and centimeter. 	Module 1	R1
2.	 Write python program to understand different File handling operations Create 3 lists – a list of names, a list of ages and a list of salaries. Generate and print a list of tuples containing name, age and salary from the 3 lists. From this list generate 3 tuples – one containing all names, another containing all ages and third containing all salaries. Write Python program to implement classes, object, Static method and inner class If any integer is given as in input through the keyboard, write a program to find whether it is odd or even number. Write a program that prints square root and cube root of numbers from 1 to 10, up to 4 decimal places. Ensure that the output is displayed in separate lines, with number center-justified and square and cube roots right-justified. Write a program to find the factorial value of any number entered through the keyboard. 	Module 2	R2
3.	1. Write Python program to create, append, update, delete records from database using GUI.	Module 3	R3

	 Write Python program to obtain histogram of any image Write Python Program to split color image in R,G,B and obtain individual histograms. Write Python program for histogram equalization Write Python Program for edge detection Write Python Program for image segmentation Write Python program to implement GUI Canvas application using Tkinter Write Python program to implement GUI Frame application using Tkinter 		
4.	1. Write Python program to study define, edit arrays and perform arithmetic operations. 2. Write python program to study selection, indexing, merging, joining, concatenation in data frames 3. Evaluate the dataset containing the GDPs of different countries to: • Find and print the name of the country with the highest GDP • Find and print the name of the country with the lowest GDP • Print text and input values iteratively • Print the entire list of the countries with their GDPs • Print the highest GDP value, lowest GDP value, mean GDP, value, standardized GDP value, and the sum of all the GDPs 4. Analyze the Federal Aviation Authority (FAA) dataset using Pandas to do the following: • View: aircraft make name, state name, aircraft model name, text information, flight phase, event description type, fatal flag • Clean the dataset and replace the fatal flag NaN with "No". • Find the aircraft types and their occurrences in the dataset • Remove all the observations where aircraft names are not available • Display the observations where fatal flag is "Yes" 5. Analyze the "auto mpg data" and draw a pair plot using seaborn library for mpg, weight, and origin. (a) Origin: This dataset was taken from the StatLib library maintained at Carnegie Mellon University. • Number of Instances: 398 • Number of Attributes: 9 including the class attribute • Attribute Information: • mpg: continuous • cylinders: multi-valued discrete • displacement: continuous • horsepower: continuous • horsepower: continuous • acceleration: continuous • model year: multi-valued discrete • origin: multi-valued discrete • origin: multi-valued discrete • car name: string (unique for each instance) 6. Write python program to use SciPy to solve a linear algebra problem.	Module 4	R4,5,6
5.	 Write python program to study linear regression Write python program to study multiple linear regression 	Module 5	R4,5,6

- 3. Write python program to study logistic regression
- 4. Write python program to study Support Vector Machine
- 5. Write python program to study decision tree algorithm
- 6. Write python program to study two-way communication between client and server.

Laboratory Assessment:

Assessment:

Term Work: Term Work shall consist of at least 10 to 12 practicals" based on the above list. Also, Term work Journal must include at least 2 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Pre-requisite Course Codes		
		7
	After tl	ne successful completion students should be able to
Course Outcomes	Identify and address community needs and challenges which help	
		learners to develop problem-solving skills and creativity in finding
		innovative solutions.
	CO2	Enhance their cultural competence and ability to work effectively in
		multicultural settings
	CO3	Critically think on complex issues considering multiple view
		points
	CO4	Demonstrate collaboration, team work, civic engagement,
		empathy, and compassion while engaging directly with community
	CO5	Develop a lifelong commitment to social justice and making a
		positive impact in the world

This course requires students to participate in field-based learning/projects generally under the supervision of faculty. The curricular component of "community engagement and service" involve activities that would expose students to the socio-economic issues in society so that the theoretical learnings can be supplemented by actual life experiences to generate solutions to real-life problems. At the end of the course, it is expected that students will have valuable learnings in terms of enhanced communication skills, increased cultural competence, improved critical thinking, leadership skills, collaboration skills, empathy & compassion, civic engagement, problem-solving skills, self-reflection & personal growth, and long-term commitment to social justice. It is expected that 26-30 hours of contact time per credit in a semester (52 to 60 hours in a semester for 2 credits) along with 13-15 hours of activities such as preparation for community engagement and service, preparation of reports, etc., and independent reading and study.

Other Guidelines to students for successful Community Engagement:

Community engagement is the process of working collaboratively with and through groups of people affiliated by geographic proximity, special interest, or similar situations to address issues affecting the well-being of those people It is a powerful vehicle for bringing about environmental and behavioural changes that will improve the health of the community and its members. It often involves partnerships and coalitions that help mobilize resources and influence systems, change relationships among partners, and serve as catalysts for changing policies, programs, and practices. Community engagement project is different as compared to traditional consultation. It is a regular engagement of community for achieving an identified goal or vision. It recognizes the role of community engagement in its broadest sense in the development of local democracy, while noting that the focus of the report is on the practice of community engagement as it relates to local authority activity. Communication, diplomacy, patience, and flexibility are essential to engage with a community.

For successful engagement conditions include: Shared and defined purpose. Willingness to collaborate. Commitment to contributing. Participation of the right people. Open and credible process. Involvement of a champion with credibility and clout. Ensure that the engagement process is complex but manageable. Initially the team will: Discuss and define the initiative and its potential impact. Set the purpose and goals for community engagement. Define the community. Know and respect the community's characteristics. Develop a relationship with the community, build trust, work with formal and informal leadership, find the community gatekeeper, identify the project champion, meet with the local organizations, and learn the assets and challenges for that community keeping in mind the 17 sustainable development goals. Find the common interests. The following four phases provide broad outline for the community engagement process:

Phase-I: Outreach

Go to the community instead of having the community come to you. Invite the stakeholders to a conversation. Create a constructive environment for dialogue allowing time to get to know the participants remembering that the community stime is valuable and must be respected. Identify the person or the organization that has convened the group and will provide initial leadership and organizational management. Outline the purpose and process for the conversation. Use a facilitator when appropriate. Define the issue and why it is important. Outline what is broken and focus on what is working. Is the issue a people problem or a situation problem? Can the problem be solved with technical expertise or will it require something else? Determine the interest and merit in hosting future discussions.

Phase-II: Gather Facts, Brainstorm and Select

Create an environment for discussion where people are comfortable asking questions, expressing doubts, and brainstorming new ideas. Gather the facts related to the issue and its impact. Use a SWOT, appreciative inquire, asset mapping, and other tools during the factfinding stage. Clarify the issue"s alignment with the community"s values and ethics. Establish the common ground on which conversations will be based. Brainstorm and gather alternative solutions. Ask the "what if" questions. Spend time discussing the options and the potential impact. Allow the process to equip the participants to see the change, feel the change, and then be prepared to change. Select the best practice/solution. If required use decision-making tools to reduce the number of options.

Phase-III: Plan and Review

Write the implementation action plan. Include the evaluation procedure that will answer the question "What will it look like when the change has happened?". Discuss the proposal with the appropriate stakeholders searching for insight and response. Use the feedback to assess and revise the plan. Stay focused on the solution.

Phase-IV: Implement and Evaluate

Implement the plan. Remember, groups want a rapid success. Identify an action that will provide a "meaningful win" within the "immediate reach." Evaluate the impact. Report the status to the community and gather feedback. Revise the plan and evaluate again. Keep the participants informed through discussion agendas, written summaries of previous discussions, goals/assignments for the next discussion, and progress reports providing accountability for delivering what was promised.

Note: * Two hours of practical class to be conducted for full class as demo/discussion/theory.

Lab Objectives:

- 1. To introduce students to entrepreneurship concepts and startup development.
- 2. To develop business idea generation, validation, and business model preparation.
- 3. To provide hands-on experience in market research, financial planning, and business pitching.
- 4. To enhance problem-solving and decision-making skills in entrepreneurial ventures.
- 5. To familiarize students with government schemes and support systems for entrepreneurs.
- **6.** To develop communication and presentation skills required for business pitching.

Lab Outcomes:

Upon successful completion of this course, students will be able to:

- 1. Understand the fundamental concepts of entrepreneurship and business models.
- 2. Conduct market research and develop business plans.
- 3. Utilize financial planning and cost analysis for startups.
- 4. Apply entrepreneurial skills to identify and solve business challenges.
- 5. Develop prototypes using open-source software for business operations.
- 6. Pitch business ideas effectively with structured presentations.

Rationale:

Most of the engineering branches are offspring of applied sciences, and their practices have a significant impact on the environment. Understanding environmental studies is essential for engineers to develop sustainable solutions, minimize ecological footprints, and promote responsible resource management. This course equips students with the knowledge of ecosystems, biodiversity, pollution control, and environmental laws, enabling them to integrate sustainability into engineering practices.

Course Objectives:

- 1. To understand the scope, importance, and role of environmental studies in public awareness and health.
- 2. To study different natural resources, their issues, and sustainable conservation.
- 3. To understand ecosystem types, structures, and functions.
- 4. To explore biodiversity, its importance, threats, and conservation.
- 5. To learn about pollution types, causes, effects, and control measures.
- 6. To understand environmental challenges, sustainability, and ethics.

Course Outcomes:

- 1. Explain the significance of environmental studies and the role of IT in environment and health.
- 2. Describe resource types, associated problems, and conservation methods.
- 3. Classify ecosystems and explain their role in ecological balance
- 4. Analyze biodiversity levels and conservation strategies, especially in India.
- 5. Explain pollution impacts and suggest preventive measures.
- 6. Discuss environmental issues and propose sustainable solutions.

DETAILED SYLLABUS:

DETIMBLE STEELIE		
Unit Name Topic Na	ame Topic Description	No of Lecture

	Environmental Studies	family welfare program. Environment and human health Women and child welfare	
Module- II	Natural Resources	Renewable and non-renewable resources. Natural resources & associated problems: a) Forest resources: b) Water resources: Natural resources & associated problems c) Mineral resources: d) Food resources: e) Energy resources: Role of an individual in conservation of natural resources: f) Equitable use of resources for sustainable lifestyles.	2
Module- III	Ecosystems	Concepts of an ecosystem. Introduction, types, characteristic features, structure and function of the following ecosystem: a. Forest ecosystem b. Grassland ecosystem c. Desert ecosystem d. Aquatic ecosystem (ponds, streams, lakes, rivers, oceans, estuaries). Case study on various ecosystems in India.	2
Module- IV	Biodiversity and its Conservation	Introduction-Definition: genetic species and ecosystem diversity. Bio-geographical classification of India Value of biodiversity: Consumptive use, productive use, social, ethical, aesthetic and option values, Biodiversity at global, national, local levels India as a mega diversity nation Case study on Bio diversity in India.	3
Module- V	Environmental Pollution Definition	Causes, effects and control measures of: a) Air pollution b) Water pollution c) Soil pollution. Solid waste management: Causes, effect and control measures of urban and industrial wastes. Role of an individual in prevention of pollution, Case study on Pollution Disaster management: floods, earthquake, cyclone and landslides. Carbon Credits for pollution prevention	3
Module- VI	Social Issues and Environment	From unsustainable to sustainable development Urban problems related to energy, Water conservation, rain water harvesting, watershed management. Environmental ethics: issues and possible solution. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies. Consumerism and waste products. Environment protection act. Public awareness	3

Definition, scope and importance. Need for public awareness,

Role of information technology in environment and human

health. Human population and the environment: Population

growth, variation among nations. Population Explosion-

Assessment:

Internal Assessment (IA) for 20 marks:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of syllabus content must be covered in First IA Test and remaining 40% to 50% of syllabus content must be covered in Second IA Test

Question paper format

- Question Paper will comprise of a total of six questions each carrying 20 marksQ.1 will be compulsory and should cover maximum contents of the syllabus
- Remaining questions will be mixed in nature (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **Three questions** needs to be answered

Lab Objectives:

- 1. To introduce a learner to the entrepreneurship and its role in economic development
- 2. To familiarize a learner with the start-up ecosystem and government initiatives in India
- 3. To explain the process of starting a business
- 4. To familiarize a learner to the building blocks of a business
- 5. To teach a learner to plan their own business with the help of Business Model Canvas

Lab Outcomes:

The learner will be able to:

- 1. discuss the role of entrepreneurship in the economic development of a nation and describe the process of starting a business
- 2. describe start-up ecosystems in Indian and global context
- 3. identify different types of business models
- 4. identify customer segments, channels and customer relationship components for a particular business
- 5. identify key activities, key partners and key resources for a particular business
- 6. develop a financial plan for a business with the help of cost structure and revenue model
- 7. prepare a complete Business Model Canvas for their own business / busine

3.	Sarasvathy"s principles for effectuation
	https://innovationenglish.sites.ku.dk/model/sarasvathy-effectuation/

List of Experiments.

The lab activities are to be conducted in a group. One group can be formed with 4-5 students. A group has to develop a Business Model Canvas and a digital prototype (Web App/ mobile app). Weekly activities are to be conducted as follows:

Sr No	Lab activities	Hrs
01	Problem identification (Pain points, Market survey)	2
02	Design a digital solution for the problem (Ideation techniques)	2
03	Preparing a business model canvas: Value proposition, Key partners, Key resources, Key activities	2
04	Preparing a business model canvas: Customer segment, Customer relationships and channels	2
05	Preparing a business model canvas: Cost and Revenue structure	2
06	Prototype development: Low fidelity	2
07	Prototype development: Customer feedback	2
08	Prototype development: High fidelity	2
09	Presentation of high-fidelity prototype	2
10		2

Sr No	List of Assignments / Tutorials	Hrs
01	Presentation on case study of a failed business model	2
02	Presentation on case study of a woman entrepreneur	2

Assessment:

Term Work: Term Work shall consist of 10 lab activities based on the above list. Also, Term work journal must include any 2 assignments from the above list.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5

Marks (Attendance)

Oral Exam: An oral exam will be held based on the above syllabus.

Course Course		Teaching Scheme (Contact Hours)			Credits Assigned			
Code	Name	Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
2994512	Design Thinking	-	2*+2 Hours Batch-Wise	-	-	2	7	2

		Examination Scheme						
Course			Theory	Marks				
Code	Course Name	Intern	nal assessi	ment Avg.	End Sem.	Term Work	Practical/ Oral	Total
		Test1	Test 2	of 2 Tests	Exam			
2994512	Design Thinking					25	25	50

Lab Objectives:

- 1. To introduce a learner to the principles of Design Thinking
- 2. To familiarize a learner with the process (stages) of Design Thinking
- 3. To expose a learner to various case studies of Design Thinking

Lab Outcomes:

Students will be able to ...

- 1. compare traditional approach to problem solving with the Design Thinking approach and discuss the principles of Design Thinking
- 2. define a user persona using empathy techniques
- 3. frame a problem statement using various Design Thinking tools
- 4. use ideation techniques to generate a pool of solutions for a problem
- 5. create prototypes using different techniques
- **6.** test the prototypes and gather feedback for refining the prototype

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	LO Mapping
0	Prerequisite	No perquisites	-	-

Definition, Comparison of Design Thinking and traditional problemsolving approach, Need for Design Thinking approach, Key tenets of Design Thinking, 5 stages of Design Thinking (Empathize, Define, Ideate, Prototype, Test)

Self-learning Topics:

I

Design thinking case studies from various domains https://www.design-thinking-association.org/explore-design-thinking-topics/external-links/design-thinking-case-study-index

II	2	Empathy:	5	L2, L3
		Foundation of empathy, Purpose of		
		empathy, Observation for empathy,		
		User observation technique, Creation		
		of empathy map		
		1 3 1		
		Self-learning Topics:		
		Creation of empathy maps		
		https://www.interaction-		
		design.org/literature/topics/empathy-		
		mapping		
III	3	Define:	5	L2, L3
Ш	3		5	L2, L3
		Significance of defining a problem,		
		Rules of prioritizing problem solving,		
		Conditions for robust problem		
		framing, Problem statement and POV		
		Self-learning Topics:		
		Creating a Persona – A step-by-step		
		guide with tips and examples		
		https://uxpressia.com/blog/how-to-		
		create-persona-guide-examples		
IV	4	Ideate:	5	L3, L7
		What is ideation? Need for ideation,		
		Ideation techniques, Guidelines for		
		ideation: Multi-disciplinary approach,		
		Imitating with grace, Breaking		
		patterns, Challenging assumptions,		
		Looking across value chain, Looking		
		beyond recommendation, Techniques		
		for ideation: Brainstorming, Mind		
		mapping		
V .		TI 6		
		Self-learning Topics:		
		How To Run an Effective Ideation		
		Workshop: A Step-By-Step Guide		
		https://uxplanet.org/how-to-run-an-		
		1 1		
		effective-ideation-workshop-a-step-by-		
		step-guide-d520e41b1b96		

V	5	Prototype:	3	L6
		Low and high-fidelity prototypes,		
		Paper prototype, Story board		
		prototype, Scenario prototype		
VI	6	Test:	3	L4, L5
		5 guidelines of conducting test, The		
		end goals of test: Desirability,		
		Feasibility and Viability, Usability		
		testing

3.	Usability Testing
	https://www.interaction-design.org/literature/topics/usability-testing

List of Experiments.The experiments are to be performed in groups. A practical batch may be divided into groups of 4-5 students.

Sr No	List of Experiments	Hrs
01	Customer Journey Mapping: Visualize the steps users take to interact with a product or service. Map out the customer journey from discovering a product to making a purchase and using the product. Identify pain points and opportunities for improvement.	2
02	Stakeholder mapping: Identify all relevant stakeholders in a project. Create a stakeholder map, categorizing stakeholders based on their influence and interest. Include management of relationships with key stakeholders.	2
03	"How Might We" Problem Framing: Transform user insights into actionable problem statements. After empathizing with users, turn challenges into "How Might We" statements that define the problem without prescribing a solution.	2
04	Brainstorming Session: Generate a pool of ideas in a creative, non-judgmental environment. Using ideation techniques like mind mapping and brainwriting, students brainstorm as many solutions as possible to their "How Might We" problem statements.	2
05	Affinity Diagramming: Organize group ideas to find patterns and insights. After brainstorming, students will categorize their ideas into themes by placing sticky notes on a wall and moving them into groups based on similarities.	2
06	Rapid Prototyping: Create quick, low-fidelity versions of solutions. Use materials like paper, cardboard, and markers to build a prototype of their solution within 30 minutes. The focus is on speed and functionality, not aesthetics.	2
07	Wireframing: Create a visual guide for digital interfaces for mobile app / web app for the problems identified in earlier lab sessions. Students will sketch wireframes of the user interface for their product or service. Use tools like Balsamiq or paper and pen for low-fidelity wireframes.	2
08	Role-Playing: Walk through a prototype from the user"s perspective. Students act as both users and designers, role-playing scenarios where they interact with their prototype (Developed in earlier lab sessions). Gather feedback from participants on how to improve the experience.	2
09	Usability Testing: Evaluation of the effectiveness and user-friendliness of a prototype (developed in earlier lab sessions). Students will have peers or target users test their prototypes, observe how they interact with it, and collect feedback on any issues or improvements needed.	2
10	Feedback Loop and Iteration: Refine solutions based on user feedback. After usability testing, students will refine their prototypes. Document changes made based on feedback and discuss how continuous iteration improves the design.	2

Sr No	List of Assignments (Any two)	Hrs
01	Create an empathy map for a target user group. Break them into four sections: <i>Says, Thinks, Feels, and Does.</i> Interview users or research their experiences to fill in the map.	3
02	Based on research, students will create user personas including demographic details, motivations, pain points, and goals. Each group will present their persona to the class.	3
03	Consider 3 examples of real-life products which have good design and bad design. Write down reasons why do you think they are good or bad designs. May take user survey to support your work.	3
04	Study any open-source design thinking tool and write a brief report about it.	3

Assessment:

Term Work: Term Work shall consist of 10 lab activities based on the above list. Also, Term work journal must include any 2 assignments from the above list.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5

Marks (Attendance)

Oral Exam: An oral exam will be held based on the above syllabus.

Vertical – 6
