

University of Mumbai

**Syllabus for
B.E. (Internet of Things)
(Sem. - V to VI)
(Choice Based Credit System)**

(Introduced from the academic year 2022-23)

Preamble

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Science and Technology (in particular Engineering) of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty resolved that course objectives and course outcomes are to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth and approach of course to be taught, which will enhance learner's learning process. Choice based Credit and grading system enables a much-required shift in focus from teacher-centric to learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. Credit assignment for courses is based on 15 weeks teaching learning process, however content of courses is to be taught in 13 weeks and remaining 2 weeks to be utilized for revision, guest lectures, coverage of content beyond syllabus etc.

There was a concern that the earlier revised curriculum more focused on providing information and knowledge across various domains of the said program, which led to heavily loading of students in terms of direct contact hours. In this regard, faculty of science and technology resolved that to minimize the burden of contact hours, total credits of entire program will be of 170, wherein focus is not only on providing knowledge but also on building skills, attitude and self learning. Therefore in the present curriculum skill based laboratories and mini projects are made mandatory across all disciplines of engineering in second and third year of programs, which will definitely facilitate self learning of students. The overall credits and approach of curriculum proposed in the present revision is in line with AICTE model curriculum.

The present curriculum will be implemented for Second Year of Engineering from the academic year 2021-22. Subsequently this will be carried forward for Third Year and Final Year Engineering in the academic years 2022-23, 2023-24, respectively.

Dr. S. K. Ukarande
Associate Dean
Faculty of Science and Technology
University of Mumbai

Dr Anuradha Muzumdar
Dean
Faculty of Science and Technology
University of Mumbai

Incorporation and Implementation of Online Contents **from NPTEL/ Swayam Platform**

The curriculum revision is mainly focused on knowledge component, skill based activities and project based activities. Self-learning opportunities are provided to learners. In the revision process this time in particular Revised syllabus of 'C' scheme wherever possible additional resource links of platforms such as NPTEL, Swayam are appropriately provided. In an earlier revision of curriculum in the year 2012 and 2016 in Revised scheme 'A' and 'B' respectively, efforts were made to use online contents more appropriately as additional learning materials to enhance learning of students.

In the current revision based on the recommendation of AICTE model curriculum overall credits are reduced to 171, to provide opportunity of self-learning to learner. Learners are now getting sufficient time for self-learning either through online courses or additional projects for enhancing their knowledge and skill sets.

The Principals/ HoD's/ Faculties of all the institute are required to motivate and encourage learners to use additional online resources available on platforms such as NPTEL/ Swayam. Learners can be advised to take up online courses, on successful completion they are required to submit certification for the same. This will definitely help learners to facilitate their enhanced learning based on their interest.

Dr. S. K. Ukarande

University of Mumbai

Preface by Board of Studies Team

It is our honor and a privilege to present the Rev-2019 'C' scheme syllabus of the Bachelor of Engineering in the Internet of Thing - IoT(effective from the year 2021-22). AICTE has introduced IoT as one of the nine emerging technology and hence many colleges affiliated with the University of Mumbai has started four years UG program for IoT. As part of the policy decision from the University end, the Board of IT got an opportunity to work on designing the syllabus for this new branch. As the Internet of Things is comparatively a young branch among other emerging engineering disciplines in the University of Mumbai, and hence while designing the syllabus promotion of an interdisciplinary approach has been considered.

The branch also provides multi-faceted scope like better placement and promotion of entrepreneurship culture among students and increased Industry Institute Interactions. Industries' views are considered as stakeholders while the design of the syllabus. As per Industry views only 16 % of graduates are directly employable. One of the reasons is a syllabus that is not in line with the latest emerging technologies. Our team of faculties has tried to include all the latest emerging technologies in the Internet of Thing syllabus. Also the first time we are giving skill-based labs and Mini-project to students from the third semester onwards, which will help students to work on the latest Internet of Thing technologies. Also the first time we are giving the choice of elective from fifth semester such that students will be mastered in one of the Internet of Thing domain. The syllabus is peer-reviewed by experts from reputed industries and as per their suggestions, it covers future emerging trends in Internet of Thing technology and research opportunities available due to these trends. .

We would like to thank senior faculties of IT, Computer and Electronics Department, of all colleges affiliated to University of Mumbai for significant contribution in framing the syllabus. Also on behalf of all faculties we thank all the industry experts for their valuable feedback and suggestions. We sincerely hope that the revised syllabus will help all graduate engineers to face the future challenges in the field of Emerging Areas of Internet of Thing.

Program Specific Outcome for graduate Program in Internet of Thing

1. Apply Core Internet of Thing knowledge to develop stable and secure Internet of Thing Application.
2. Identify, Design, Internet of Thing infrastructures for an enterprise using concepts and best Practices in the area Internet of Thing Domain.
3. Ability to work in multidisciplinary projects and make it Internet of Thing enabled Applications.

Course Code	Course Name	Credits
IoTC501	Theoretical Computer Science	3

Prerequisite: Discrete Structures

Course Objectives:

1. Acquire conceptual understanding of fundamentals of grammars and languages.
2. Build concepts of theoretical design of deterministic and non-deterministic finite automata and push down automata.
3. Develop understanding of different types of Turing machines and applications.
4. Understand the concept of Undecidability.

Course Outcomes: At the end of the course, the students will be able to

1. Understand concepts of Theoretical Computer Science, difference and equivalence of DFA and NFA, languages described by finite automata and regular expressions.
2. Design Context free grammar, pushdown automata to recognize the language.
3. Develop an understanding of computation through Turing Machine.
4. Acquire fundamental understanding of decidability and undecidability.

Module No.	Unit No.	Topics	Theory Hrs.
1.0		Basic Concepts and Finite Automata	09
	1.1	Importance of TCS, Alphabets, Strings, Languages, Closure properties, Finite Automata (FA) and Finite State machine (FSM).	
	1.2	Deterministic Finite Automata (DFA) and Nondeterministic Finite Automata (NFA): Definitions, transition diagrams and Language recognizers, Equivalence between NFA with and without ϵ -transitions, NFA to DFA Conversion, Minimization of DFA, FSM with output: Moore and Mealy machines, Applications and limitations of FA.	
2.0		Regular Expressions and Languages	07
	2.1	Regular Expression (RE), Equivalence of RE and FA, Arden's Theorem, RE Applications	
	2.2	Regular Language (RL), Closure properties of RLs, Decision properties of RLs, Pumping lemma for RLs.	
3.0		Grammars	08
	3.1	Grammars and Chomsky hierarchy	
	3.2	Regular Grammar (RG), Equivalence of Left and Right linear grammar, Equivalence of RG and FA.	

	3.3	Context Free Grammars (CFG) Definition, Sentential forms, Leftmost and Rightmost derivations, Parse tree, Ambiguity, Simplification and Applications, Normal Forms: Chomsky Normal Forms (CNF) and Greibach Normal Forms (GNF), Context Free language (CFL) - Pumping lemma, Closure properties.	
4.0		Pushdown Automata(PDA)	04
	4.1	Definition, Language of PDA,PDA as generator, decider and acceptor of CFG, Deterministic PDA , Non-Deterministic PDA, Application of PDA.	
5.0		Turing Machine (TM)	09
	5.1	Definition, Design of TM as generator, decider and acceptor, Variants of TM: Multitrack, Multitape, Universal TM, Applications, Power and Limitations of TMs.	
6.0		Undecidability	02
	6.1	Decidability and Undecidability, Recursive and Recursively Enumerable Languages, Halting Problem, Rice's Theorem, Post Correspondence Problem.	
Total			39

Text Books:	
1.	John E. Hopcroft, Rajeev Motwani, Jeffery D. Ullman, <i>"Introduction to Automata Theory, Languages and Computation"</i> , 3 rd Edition, Pearson Education, 2008.
2.	Michael Sipser, <i>"Theory of Computation"</i> , 3 rd Edition, Cengage learning. 2013.
3.	Vivek Kulkarni, <i>"Theory of Computation"</i> , Illustrated Edition, Oxford University Press, (12 April 2013) India.
Reference Books:	
1.	J. C. Martin, <i>"Introduction to Languages and the Theory of Computation"</i> , 4 th Edition, Tata McGraw Hill Publication, 2013.
2.	Kavi Mahesh, <i>"Theory of Computation: A Problem Solving Approach"</i> , Kindle Edition, Wiley-India, 2011.

Assessment:	
Internal Assessment:	
1.	Assessment consists of two class tests of 20 marks each.
2.	The first class test is to be conducted when approx. 40% syllabus is completed and second class test when additional 40% syllabus is completed.
3.	Duration of each test shall be one hour.
Term work:	
1.	Term Work should consist of at least 06 assignments (at least one assignment on each module).

2.	Assignment (best 5 assignments)	20 marks
	Attendance	5 marks
3.	It is recommended to use JFLAP software (www.jflap.org) for better teaching and learning processes.	

End Semester Theory Examination:

1.	Question paper will comprise of 6 questions, each carrying 20 marks.
2.	The students need to solve total 4 questions.
3.	Question No.1 will be compulsory and based on entire syllabus.
4.	Remaining questions (Q.2 to Q.6) will cover all the modules of syllabus.

Course Code:	Course Title	Credit
IoTC502	Software Engineering	3

Prerequisite: Object Oriented Programming with Java , Python Programming

Course Objectives:

- 1 To provide the knowledge of software engineering discipline.
- 2 To apply analysis, design and testing principles to software project development.
- 3 To demonstrate and evaluate real world software projects.

Course Outcomes: On successful completion of course, learners will be able to:

- 1 Identify requirements & assess the process models.
- 2 Plan, schedule and track the progress of the projects.
- 3 Design the software projects.
- 4 Do testing of software project.
- 5 Identify risks, manage the change to assure quality in software projects.

Module		Content	Hrs
1		Introduction To Software Engineering and Process Models	7
	1.1	Software Engineering-process framework, the Capability Maturity Model (CMM), Advanced Trends in Software Engineering	
	1.2	Prescriptive Process Models: The Waterfall, Incremental Process Models, Evolutionary Process Models: RAD & Spiral	
	1.3	Agile process model: Extreme Programming (XP), Scrum, Kanban	
2		Software Requirements Analysis and Modeling	4
	2.1	Requirement Engineering, Requirement Modeling, Data flow diagram, Scenario based model	
	2.2	Software Requirement Specification document format(IEEE)	
3		Software Estimation Metrics	7
	3.1	Software Metrics, Software Project Estimation (LOC, FP, COCOMO II)	
	3.2	Project Scheduling & Tracking	
4		Software Design	7
	4.1	Design Principles & Concepts	
	4.2	Effective Modular Design, Cohesion and Coupling, Architectural design	
5		Software Testing	7
	5.1	Unit testing, Integration testing, Validation testing, System testing	
	5.2	Testing Techniques, white-box testing: Basis path, Control structure testing black-box testing: Graph based, Equivalence, Boundary Value	
	5.3	Types of Software Maintenance, Re-Engineering, Reverse Engineering	
6		Software Configuration Management, Quality Assurance and Maintenance	7
	6.1	Risk Analysis & Management: Risk Mitigation, Monitoring and Management Plan (RMMM).	
	6.2	Quality Concepts and Software Quality assurance Metrics, Formal Technical Reviews, Software Reliability	
	6.3	The Software Configuration Management (SCM) ,Version Control and Change Control

Course Code:	Course Title	Credit
IoTC503	Computer Network	3

Prerequisite: None

Course Objectives:

- 1 To introduce concepts and fundamentals of data communication and computer networks.
- 2 To explore the inter-working of various layers of OSI.
- 3 To explore the issues and challenges of protocols design while delving into TCP/IP protocol suite.
- 4 To assess the strengths and weaknesses of various routing algorithms.
- 5 To understand various transport layer and application layer protocols.

Course Outcomes: On successful completion of course, learner will be able to

- 1 Demonstrate the concepts of data communication at physical layer and compare ISO - OSI model with TCP/IP model.
- 2 Explore different design issues at data link layer.
- 3 Design the network using IP addressing and sub netting / supernetting schemes.
- 4 Analyze transport layer protocols and congestion control algorithms.
- 5 Explore protocols at application layer

Module		Content	Hrs
1		Introduction to Networking	4
	1.1	Introduction to computer network, network application, network software and hardware components (Interconnection networking devices), Network topology, protocol hierarchies, design issues for the layers, connection oriented and connectionless services	
	1.2	Reference models: Layer details of OSI, TCP/IP models. Communication between layers.	
2		Physical Layer	3
	2.1	Introduction to Communication Electromagnetic Spectrum	
	2.2	Guided Transmission Media: Twisted pair, Coaxial, Fiber optics.	
3		Data Link Layer	8
	3.1	DLL Design Issues (Services, Framing, Error Control, Flow Control), Error Detection and Correction(Hamming Code, CRC, Checksum) , Elementary Data Link protocols , Stop and Wait, Sliding Window(Go Back N, Selective Repeat)	
	3.2	Medium Access Control sublayer Channel Allocation problem, Multiple access Protocol(Aloha, Carrier Sense Multiple Access (CSMA/CD)	
4		Network layer	12
	4.1	Network Layer design issues, Communication Primitives: Unicast, Multicast, Broadcast. IPv4 Addressing (classfull and classless), Subnetting, Supernetting design problems ,IPv4 Protocol, Network Address Translation (NAT), IPv6	
	4.2	Routing algorithms : Shortest Path (Dijkstra's), Link state routing, Distance Vector Routing	
	4.3	Protocols - ARP,RARP, ICMP, IGMP	

	4.4	Congestion control algorithms: Open loop congestion control, Closed loop congestion control, QoS parameters, Token & Leaky bucket algorithms	
5		Transport Layer	6
	5.1	The Transport Service: Transport service primitives, Berkeley Sockets, Connection management (Handshake), UDP, TCP, TCP state transition, TCP timers	
	5.2	TCP Flow control (sliding Window), TCP Congestion Control: Slow Start	
6		Application Layer	6
	6.1	DNS: Name Space, Resource Record and Types of Name Server. HTTP, SMTP, Telnet, FTP, DHCP

Course Code:	Course Title	Credit
IoTC504	Data Warehousing and Mining	3

Prerequisite: Database Concepts	
Course Objectives:	
1.	To identify the significance of Data Warehousing and Mining.
2.	To analyze data, choose relevant models and algorithms for respective applications.
3.	To study web data mining.
4.	To develop research interest towards advances in data mining.
Course Outcomes: At the end of the course, the student will be able to	
1.	Understand data warehouse fundamentals and design data warehouse with dimensional modelling and apply OLAP operations.
2.	Understand data mining principles and perform Data preprocessing and Visualization.
3.	Identify appropriate data mining algorithms to solve real world problems.
4.	Compare and evaluate different data mining techniques like classification, prediction, clustering and association rule mining
5.	Describe complex information and social networks with respect to web mining.

Module	Content	Hrs
1	Data Warehousing Fundamentals	8
	Introduction to Data Warehouse, Data warehouse architecture, Data warehouse versus Data Marts, E-R Modeling versus Dimensional Modeling, Information Package Diagram, Data Warehouse Schemas; Star Schema, Snowflake Schema, Factless Fact Table, Fact Constellation Schema. Update to the dimension tables. Major steps in ETL process, OLTP versus OLAP, OLAP operations: Slice, Dice, Rollup, Drilldown and Pivot.	
2	Introduction to Data Mining, Data Exploration and Data Pre-processing	8
	Data Mining Task Primitives, Architecture, KDD process, Issues in Data Mining, Applications of Data Mining, Data Exploration: Types of Attributes, Statistical Description of Data, Data Visualization, Data Preprocessing: Descriptive data summarization, Cleaning, Integration & transformation, Data reduction, Data Discretization and Concept hierarchy generation.	
3	Classification	6
	Basic Concepts, Decision Tree Induction, Naïve Bayesian Classification, Accuracy and Error measures, Evaluating the Accuracy of a Classifier: Holdout & Random Subsampling, Cross Validation, Bootstrap.	
4	Clustering	6
	Types of data in Cluster analysis, Partitioning Methods (<i>k</i> -Means, <i>k</i> -Medoids), Hierarchical Methods (Agglomerative, Divisive).	
5	Mining frequent patterns and associations	6
	Market Basket Analysis, Frequent Item sets, Closed Item sets, and Association Rule, Frequent Pattern Mining, Apriori Algorithm, Association Rule Generation, Improving the Efficiency of Apriori, Mining Frequent Itemsets without candidate generation, Introduction to Mining Multilevel Association Rules and Mining Multidimensional Association Rules.	

6	Web Mining	5
	Introduction, Web Content Mining: Crawlers, Harvest System, Virtual Web View, Personalization, Web Structure Mining: Page Rank, Clever, Web Usage Mining.	

Textbooks:

1	Paulraj Ponniah, “ <i>Data Warehousing: Fundamentals for IT Professionals</i> ”, Wiley India.

Course Code:	Course Title	Credit
IoTDLO5011	Probabilistic Graphical Models	3

Prerequisite: Engineering Mathematics, Discrete Structure	
Course Objectives:	
1	To give comprehensive introduction of probabilistic graphical models
2	To make inferences, learning, actions and decisions while applying these models
3	To introduce real-world trade-offs when using probabilistic graphical models in practice
4	To develop the knowledge and skills necessary to apply these models to solve real world problems.
Course Outcomes: At the end of the course, the student will be able to	
1	Understand basic concepts of probabilistic graphical modelling.
2	Model and extract inference from various graphical models like Bayesian Networks, Markov Models
3	Perform learning and take actions and decisions using probabilistic graphical models
4	Represent real world problems using graphical models; design inference algorithms; and learn the structure of the graphical model from data.
5	Design real life applications using probabilistic graphical models.

Module		Content	Hrs
1.		Introduction to Probabilistic Graphical Modeling	5
	1.1	Introduction to Probability Theory: Probability Theory, Basic Concepts in Probability, Random Variables and Joint Distribution, Independence and Conditional Independence, Continuous Spaces, Expectation and Variances	
	1.2	Introduction to Graphs: Nodes and Edges, Subgraphs, Paths and Trails, Cycles and Loops	
	1.3	Introduction to Probabilistic Graph Models: Bayesian Network, Markov Model, Hidden Markov Model	
	1.4	Applications of PGM	
2.		Bayesian Network Model and Inference	10
	2.1	Directed Graph Model: Bayesian Network-Exploiting Independence Properties, Naive Bayes Model, Bayesian Network Model, Reasoning Patterns, Basic Independencies in Bayesian Networks, Bayesian Network Semantics, Graphs and Distributions. Modelling: Picking variables, Picking Structure, Picking Probabilities, D-separation	
	2.2	Local Probabilistic Models: Tabular CPDs, Deterministic CPDs, Context Specific CPDs, Generalized Linear Models.	

	2.3	Exact inference variable elimination: Analysis of Complexity, Variable Elimination, Conditioning, Inference with Structured CPDs.	
3.		Markov Network Model and Inference	8
	3.1	Undirected Graph Model : Markov Model-Markov Network, Parameterization of Markov Network, Gibb's distribution, Reduced Markov Network, Markov Network Independencies, From Distributions to Graphs, Fine Grained Parameterization, Over Parameterization	
	3.2	Exact inference variable elimination: Graph Theoretic Analysis for Variable Elimination, Conditioning	
4.		Hidden Markov Model and Inference	6
	4.1	Template Based Graph Model : HMM- Temporal Models, Template Variables and Template Factors, Directed Probabilistic Models, Undirected Representation, Structural Uncertainty.	
5.		Learning and Taking Actions and Decisions	6
	5.1	Learning Graphical Models: Goals of Learning, Density Estimation, Specific Prediction Tasks, Knowledge Discovery. Learning as Optimization: Empirical Risk, over fitting, Generalization, Evaluating Generalization Performance, Selecting a Learning Procedure, Goodness of fit, Learning Tasks. Parameter Estimation: Maximum Likelihood Estimation, MLE for Bayesian Networks	
	5.2	Causality: Conditioning and Intervention, Correlation and Causation, Causal Models, Structural Causal Identifiability, Mechanisms and Response Variables, Learning Causal Models. Utilities and Decisions: Maximizing Expected Utility, Utility Curves, Utility Elicitation. Structured Decision Problems: Decision Tree	
6.		Applications	4
	6.1	Application of Bayesian Networks: Classification, Forecasting, Decision Making	
	6.2	Application of Markov Models: Cost Effectiveness Analysis, Relational Markov Model and its Applications, Application in Portfolio Optimization	
	6.3	Application of HMM: Speech Recognition, Part of Speech Tagging, Bioinformatics.	

Textbooks:

Assessment:

Internal Assessment:

Assessment consists of two class tests of 20 marks each. The first class test is to be conducted when approx. 40% syllabus is completed and second class test when additional 40% syllabus is completed. Duration of each test shall be one hour.

End Semester Theory Examination:

1.	Question paper will comprise of total six questions.
2.	All question carries equal marks
3.	Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
4.	Only Four question need to be solved.
5.	In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

Suggested List of Experiments:	
Sr. No	Experiment
1.	Experiment on Probability Theory
2.	Experiment on Graph Theory
3.	Experiment on Bayesian Network Modelling
4.	Experiment on Markov Chain Modeling
5.	Experiment on HMM
6.	Experiment on Maximum Likelihood Estimation
7.	Decision Making using Decision Trees
8.	Learning with Optimization
** Suggestion: Laboratory work based on above syllabus can be incorporated along with mini project in CSM501: Mini-Project.	

Course Code:	Course Title	Credit
IoTDLO5012	Internet Programming	3

Prerequisite: Data Structures, Programming Languages- JAVA, Python

Course Objectives:

- 1 To get familiar with the basics of Internet Programming.
- 2 To acquire knowledge and skills for creation of web site considering both client and server-side programming
- 3 To gain ability to develop responsive web applications and explore different web extensions and web services standards
- 4 To learn characteristics of RIA and React Js

Course Outcomes:

- 1 Implement interactive web page(s) using HTML and CSS.
- 2 Design a responsive web site using JavaScript and demonstrate database connectivity using JDBC
- 3 Demonstrate Rich Internet Application using Ajax and demonstrate and differentiate various Web Extensions
- 4 Demonstrate web application using Reactive Js

Module		Content	Hrs
1		Introduction to Web Technology	10
	1.1	Web Essentials: Clients, Servers and Communication, The Internet, Basic Internet protocols, World wide web, HTTP Request Message, HTTP Response Message, Web Clients, Web Servers HTML5 – fundamental syntax and semantics, Tables, Lists, Image, HTML5 control elements, Semantic elements, Drag and Drop, Audio – Video controls CSS3 – Inline, embedded and external style sheets – Rule cascading, Inheritance, Backgrounds, Border Images, Colors, Shadows, Text, Transformations, Transitions, Animation, Basics of Bootstrap.	
2		Front End Development	7
	2.1	Java Script: An introduction to JavaScript–JavaScript DOM Model–Date and Objects-Regular Expressions- Exception Handling-Validation-Built-in objects-Event Handling, DHTML with JavaScript–JSON introduction – Syntax – Function Files – Http Request –SQL.	
3.		Back End Development	7
	3.1	Servlets: Java Servlet Architecture, Servlet Life Cycle, Form GET and POST actions, Session Handling, Understanding Cookies, Installing and Configuring Apache Tomcat Web Server, Database Connectivity: JDBC perspectives, JDBC program example JSP: Understanding Java Server Pages, JSP Standard Tag Library (JSTL), Creating HTML forms by embedding JSP code.	
4		Rich Internet Application (RIA)	4
	4.1	Characteristics of RIA, Introduction to AJAX: AJAX design basics, AJAX vs Traditional Approach, Rich User Interface using Ajax, jQuery framework with AJAX.	
5		Web Extension: PHP and XML	6
	5.1	XML –DTD (Document Type Definition), XML Schema, Document Object Model, Presenting XML, Using XML Parsers: DOM and SAX, XSL-eXtensible Stylesheet Language	

	5.2	Introduction to PHP - Data types, control structures, built in functions, building web applications using PHP- tracking users, PHP and MySQL database connectivity with example.	
6		React js	5
	6.1	Introduction, React features, App “Hello World” Application, Introduction to JSX, Simple Application using JSX.	
			39

The following list can be used as a guideline for mini project:

1	Create Simple web page using HTML5
2	Design and Implement web page using CSS3 and HTML5
3	Form Design and Client-Side Validation using: a. Javascript and HTML5, b. Javascript and JQuery
4	Develop interactive web pages using HTML 5 with JDBC database connectivity
5	Develop simple web page using PHP
6	Develop interactive web pages using PHP with database connectivity MYSQL
7	Develop XML web page using DTD, XSL
8	Implement a web page using Ajax and PHP
9	Case study based on Reactive js
10	Installation of the React DOM library.
* Suggestion: Laboratory work based on above syllabus can be incorporated as mini project in CSM501: Mini-Project.	

Course Code:	Course Title	Credit
IoTDLO5013	Advance Database Management System	3

Prerequisite: Database Management System

Course Objectives:

- 1 To provide insights into distributed database designing
- 2 To specify the various approaches used for using XML and JSON technologies.
- 3 To apply the concepts behind the various types of NoSQL databases and utilize it for MongoDB
- 4 To learn about the trends in advance databases

Course Outcomes: After the successful completion of this course learner will be able to:

- 1 Design distributed database using the various techniques for query processing
- 2 Measure query cost and perform distributed transaction management
- 3 Organize the data using XML and JSON database for better interoperability
- 4 Compare different types of NoSQL databases
- 5 Formulate NoSQL queries using MongoDB
- 6 Describe various trends in advance databases through temporal, graph based and spatial based databases

Module		Content	Hrs
1		Distributed Databases	3
	1.1	Introduction, Distributed DBMS Architecture, Data Fragmentation, Replication and Allocation Techniques for Distributed Database Design.	
2		Distributed Database Handling	8
	2.1	Distributed Transaction Management – Definition, properties, types, architecture Distributed Query Processing - Characterization of Query Processors, Layers/ phases of query processing.	
	2.2	Distributed Concurrency Control- Taxonomy, Locking based, Basic TO algorithm, Recovery in Distributed Databases: Failures in distributed database, 2PC and 3PC protocol.	
3		Data interoperability – XML and JSON	6
	3.1	XML Databases: Document Type Definition, XML Schema, Querying and Transformation: XPath and XQuery.	
	3.2	Basic JSON syntax, (Java Script Object Notation), JSON data types, Stringifying and parsing the JSON for sending & receiving, JSON Object retrieval using key-value pair and JQuery, XML Vs JSON	
4		NoSQL Distribution Model	10
	4.1	NoSQL database concepts: NoSQL data modeling, Benefits of NoSQL, comparison between SQL and NoSQL database system.	
	4.2	Replication and sharding, Distribution Models Consistency in distributed data, CAP theorem, Notion of ACID Vs BASE, handling Transactions, consistency and eventual consistency	
	4.3	Types of NoSQL databases: Key-value data store, Document database and Column Family Data store, Comparison of NoSQL databases w.r.t CAP theorem and ACID properties.	
5		NoSQL using MongoDB	6

	5.1	NoSQL using MongoDB: Introduction to MongoDB Shell, Running the MongoDB shell, MongoDB client, Basic operations with MongoDB shell, Basic Data Types, Arrays, Embedded Documents	
	5.2	Querying MongoDB using find() functions, advanced queries using logical operators and sorting, simple aggregate functions, saving and updating document. MongoDB Distributed environment: Concepts of replication and horizontal scaling through sharding in MongoDB	
6		Trends in advance databases	6
	6.1	Temporal database: Concepts, time representation, time dimension, incorporating time in relational databases.	
	6.2	Graph Database: Introduction, Features, Transactions, consistency, Availability, Querying, Case Study Neo4J	
	6.3	Spatial database: Introduction, data types, models, operators and queries	
			39

Lab Code	Lab Name	Credit
IoTL501	Software Engineering Lab	1

Prerequisite: Object Oriented Programming with Java , Python Programming

Lab Objectives:

- | | |
|---|---|
| 1 | To solve real life problems by applying software engineering principles |
| 2 | To impart state-of-the-art knowledge on Software Engineering |

Lab Outcomes: On successful completion of laboratory experiments, learners will be able to :

- | | |
|---|--|
| 1 | Identify requirements and apply software process model to selected case study. |
| 2 | Develop architectural models for the selected case study. |
| 3 | Use computer-aided software engineering (CASE) tools. |

Suggested List of Experiments - Assign the case study/project as detail statement of problem to a group of two/three students. Laboratory work will be based on course syllabus with minimum 10 experiments. Open source computer-aided software engineering (CASE) tools can be used for performing the experiment.

Sr. No.	Title of Experiment
1	Application of at least two traditional process models.
2	Application of the Agile process models.
3	Preparation of software requirement specification (SRS) document in IEEE format.
4	Structured data flow analysis.
5	Use of metrics to estimate the cost.
6	Scheduling & tracking of the project.
7	Write test cases for black box testing.
8	Write test cases for white box testing.
9	Preparation of Risk Mitigation, Monitoring and Management Plan (RMMM).
10	Version controlling of the project.

Term Work:

- | | |
|---|--|
| 1 | Term work should consist of 10 experiments. |
| 2 | Journal must include at least 2 assignments on content of theory and practical of “Software Engineering” |
| 3 | The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and minimum passing marks in term work. |
| 4 | Total 25 Marks (Experiments: 15-marks, Attendance Theory & Practical: 05-marks, Assignments: 05-marks) |

Oral & Practical exam

	Based on the entire syllabus of CSC502 and CSL501 syllabus
--	--

Lab Code	Lab Name	Credit
IoTL502	Computer Network Lab	1

Prerequisite: None

Lab Objectives:

- | | |
|---|---|
| 1 | To practically explore OSI layers and understand the usage of simulation tools. |
| 2 | To analyze, specify and design the topological and routing strategies for an IP based networking infrastructure. |
| 3 | To identify the various issues of a packet transfer from source to destination, and how they are resolved by the various existing protocols |

Lab Outcomes: On successful completion of lab, learner will be able to

- | | |
|---|--|
| 1 | Design and setup networking environment in Linux. |
| 2 | Use Network tools and simulators such as NS2, Wireshark etc. to explore networking algorithms and protocols. |
| 3 | Implement programs using core programming APIs for understanding networking concepts. |

Suggested List of Experiments

Sr. No.	Title of Experiment
1.	Study of RJ45 and CAT6 Cabling and connection using crimping tool.
2.	Use basic networking commands in Linux (ping, tracert, nslookup, netstat, ARP, RARP, ip, ifconfig, dig, route)
3.	Build a simple network topology and configure it for static routing protocol using packet tracer. Setup a network and configure IP addressing, subnetting, masking.
4.	Perform network discovery using discovery tools (eg. Nmap, mrtg)
5.	Use Wire shark to understand the operation of TCP/IP layers: • Ethernet Layer: Frame header, Frame size etc. • Data Link Layer: MAC address, ARP (IP and MAC address binding) • Network Layer: IP Packet (header, fragmentation), ICMP (Query and Echo) • Transport Layer: TCP Ports, TCP handshake segments etc. • Application Layer: DHCP, FTP, HTTP header formats
6.	Use simulator (Eg. NS2) to understand functioning of ALOHA, CSMA/CD.
7.	Study and Installation of Network Simulator (NS3)
8.	a. Set up multiple IP addresses on a single LAN. b. Using nestat and route commands of Linux, do the following: • View current routing table • Add and delete routes • Change default gateway c. Perform packet filtering by enabling IP forwarding using IPtables in Linux.
9	Design VPN and Configure RIP/OSPF using Packet tracer.
10.	Socket programming using TCP or UDP
11.	Perform File Transfer and Access using FTP
12.	Perform Remote login using Telnet server

Term Work:

- | | |
|---|--|
| 1 | Term work should consist of 10 experiments. |
| 2 | Journal must include at least 2 assignments on content of theory and practical of “Computer Network” |
| 3 | The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and minimum passing marks in term work. |
| 4 | Total 25 Marks (Experiments: 15-marks, Attendance Theory& Practical: 05-marks, |

	Assignments: 05-marks)
Oral & Practical exam	
	Based on the entire syllabus of CSC503: Computer Network

Useful Links	
1	https://www.netacad.com/courses/packet-tracer/introduction-packet-tracer
2	https://www.coursera.org/projects/data-forwarding-computer-networks
3	https://www.edx.org/course/ilabx-the-internet-masterclass

Lab Code	Lab Name	Credit
IoTL503	Data Warehousing and Mining Lab	1

Prerequisite: Database Concepts

Lab Objectives:

1. Learn how to build a data warehouse and query it.
2. Learn about the data sets and data preprocessing.
3. Demonstrate the working of algorithms for data mining tasks such Classification, clustering, Association rule mining & Web mining
4. Apply the data mining techniques with varied input values for different parameters.
5. Explore open source software (like WEKA) to perform data mining tasks.

Lab Outcomes: At the end of the course, the student will be able to

1. Design data warehouse and perform various OLAP operations.
2. Implement data mining algorithms like classification.
3. Implement clustering algorithms on a given set of data sample.
4. Implement Association rule mining & web mining algorithm.

Suggested List of Experiments

Sr. No.	Title of Experiment
1	One case study on building Data warehouse/Data Mart • Write Detailed Problem statement and design dimensional modelling (creation of star and snowflake schema)
2	Implementation of all dimension table and fact table based on experiment 1 case study
3	Implementation of OLAP operations: Slice, Dice, Rollup, Drilldown and Pivot based on experiment 1 case study
4	Implementation of Bayesian algorithm
5	Implementation of Data Discretization (any one) & Visualization (any one)
6	Perform data Pre-processing task and demonstrate Classification, Clustering, Association algorithm on data sets using data mining tool (WEKA/R tool)
7	Implementation of Clustering algorithm (K-means/K-medoids)
8	Implementation of any one Hierarchical Clustering method
9	Implementation of Association Rule Mining algorithm (Apriori)
10	Implementation of Page rank/HITS algorithm

Term Work:

1. Term work should consist of 10 experiments.
2. Journal must include at least 1 assignment on content of theory and practical of “Data Warehousing and Mining”
3. The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and minimum passing marks in term work.
4. Total 25 Marks (Experiments: 15-marks, Attendance (Theory & Practical): 05-marks, Assignments: 05-marks)

Oral & Practical exam

Based on the entire syllabus of CSC504 : Data Warehousing and Mining

Course Code	Course Name	Credit
CSL504	Professional Communication & Ethics II	02

Course Rationale: This curriculum is designed to build up a professional and ethical approach, effective oral and written communication with enhanced soft skills. Through practical sessions, it augments student's interactive competence and confidence to respond appropriately and creatively to the implied challenges of the global Industrial and Corporate requirements. It further inculcates the social responsibility of engineers as technical citizens.

Course Objectives

1	To discern and develop an effective style of writing important technical/business documents.
2	To investigate possible resources and plan a successful job campaign.
3	To understand the dynamics of professional communication in the form of group discussions, meetings, etc. required for career enhancement.
4	To develop creative and impactful presentation skills.
5	To analyze personal traits, interests, values, aptitudes and skills.
6	To understand the importance of integrity and develop a personal code of ethics.

Course Outcomes: At the end of the course, the student will be able to

1	Plan and prepare effective business/ technical documents which will in turn provide solid foundation for their future managerial roles.
2	Strategize their personal and professional skills to build a professional image and meet the demands of the industry.
3	Emerge successful in group discussions, meetings and result-oriented agreeable solutions in group communication situations.
4	Deliver persuasive and professional presentations.
5	Develop creative thinking and interpersonal skills required for effective professional communication.
6	Apply codes of ethical conduct, personal integrity and norms of organizational behaviour.

Module	Contents	Hours
1	ADVANCED TECHNICAL WRITING: PROJECT/PROBLEM BASED LEARNING (PBL)	06
	Purpose and Classification of Reports: Classification on the basis of: Subject Matter (Technology, Accounting, Finance, Marketing, etc.), Time Interval (Periodic, One-time, Special), Function (Informational, Analytical, etc.), Physical Factors (Memorandum, Letter, Short & Long) Parts of a Long Formal Report: Prefatory Parts (Front Matter), Report Proper (Main Body), Appended Parts (Back Matter) Language and Style of Reports: Tense, Person & Voice of Reports, Numbering Style of Chapters, Sections, Figures, Tables and Equations, Referencing Styles in APA & MLA Format, Proofreading through Plagiarism Checkers Definition, Purpose & Types of Proposals: Solicited (in conformance with RFP) & Unsolicited Proposals, Types (Short and Long proposals) Parts of a Proposal: Elements, Scope and Limitations, Conclusion Technical Paper Writing: Parts of a Technical Paper (Abstract, Introduction, Research Methods, Findings and Analysis, Discussion, Limitations, Future Scope and References), Language and Formatting, Referencing in IEEE Format	

2	EMPLOYMENT SKILLS	06
	Cover Letter & Resume: Parts and Content of a Cover Letter, Difference between Bio-data, Resume & CV, Essential Parts of a Resume, Types of Resume (Chronological, Functional & Combination) Statement of Purpose: Importance of SOP, Tips for Writing an Effective SOP Verbal Aptitude Test: Modelled on CAT, GRE, GMAT exams Group Discussions: Purpose of a GD, Parameters of Evaluating a GD, Types of GDs (Normal, Case-based & Role Plays), GD Etiquettes Personal Interviews: Planning and Preparation, Types of Questions, Types of Interviews (Structured, Stress, Behavioural, Problem Solving & Case-based), Modes of Interviews: Face-to-face (One-to one and Panel) Telephonic, Virtual	
3	BUSINESS MEETINGS	02
	Conducting Business Meetings: Types of Meetings, Roles and Responsibilities of Chairperson, Secretary and Members, Meeting Etiquette Documentation: Notice, Agenda, Minutes	
4	TECHNICAL/ BUSINESS PRESENTATIONS	02
	Effective Presentation Strategies: Defining Purpose, Analyzing Audience, Location and Event, Gathering, Selecting & Arranging Material, structuring a Presentation, Making Effective Slides, Types of Presentations Aids, Closing a Presentation, Platform skills Group Presentations: Sharing Responsibility in a Team, Building the contents and visuals together, Transition Phases	
5	INTERPERSONAL SKILLS	08
	Interpersonal Skills: Emotional Intelligence, Leadership & Motivation, Conflict Management & Negotiation, Time Management, Assertiveness, Decision Making Start-up Skills: Financial Literacy, Risk Assessment, Data Analysis (e.g. Consumer Behaviour, Market Trends, etc.)	
6	CORPORATE ETHICS	02
	Intellectual Property Rights: Copyrights, Trademarks, Patents, Industrial Designs, Geographical Indications, Integrated Circuits, Trade Secrets (Undisclosed Information) Case Studies: Cases related to Business/ Corporate Ethics	

List of assignments: (In the form of Short Notes, Questionnaire/ MCQ Test, Role Play, Case Study, Quiz, etc.)

Sr. No.	Title of Experiment
1	Cover Letter and Resume
2	Short Proposal
3	Meeting Documentation
4	Writing a Technical Paper/ Analyzing a Published Technical Paper
5	Writing a SOP
6	IPR
7	Interpersonal Skills
Note:	
1	The Main Body of the project/book report should contain minimum 25 pages (excluding Front and Back matter).

2	The group size for the final report presentation should not be less than 5 students or exceed 7 students.
3	There will be an end-semester presentation based on the book report.
Assessment:	
Term Work:	
1	Term work shall consist of minimum 8 experiments.
2	The distribution of marks for term work shall be as follows: Assignment : 10 Marks Attendance : 5 Marks Presentation slides : 5 Marks Book Report (hard copy) : 5 Marks
3	The final certification and acceptance of term work ensures the satisfactory performance of laboratory work and minimum passing in the term work.
Internal oral: Oral Examination will be based on a GD & the Project/Book Report presentation.	
	Group Discussion : 10 marks Project Presentation : 10 Marks Group Dynamics : 5 Marks
Books Recommended: Textbooks and Reference books

Course Code	Course Name	Credits
IoTM501	Mini Project 2A	02

Objectives	
1	To understand and identify the problem
2	To apply basic engineering fundamentals and attempt to find solutions to the problems.
3	Identify, analyze, formulate and handle programming projects with a comprehensive and systematic approach
4	To develop communication skills and improve teamwork amongst group members and inculcate the process of self-learning and research.
Outcome: Learner will be able to...	
1	Identify societal/research/innovation/entrepreneurship problems through appropriate literature surveys
2	Identify Methodology for solving above problem and apply engineering knowledge and skills to solve it
3	Validate, Verify the results using test cases/benchmark data/theoretical/inferences/experiments/simulations
4	Analyze and evaluate the impact of solution/product/research/innovation /entrepreneurship towards societal/environmental/sustainable development
5	Use standard norms of engineering practices and project management principles during project work
6	Communicate through technical report writing and oral presentation. • The work may result in research/white paper/ article/blog writing and publication • The work may result in business plan for entrepreneurship product created • The work may result in patent filing.
7	Gain technical competency towards participation in Competitions, Hackathons, etc.
8	Demonstrate capabilities of self-learning, leading to lifelong learning.
9	Develop interpersonal skills to work as a member of a group or as leader
Guidelines for Mini Project	
1	Mini project may be carried out in one or more form of following: Product preparations, prototype development model, fabrication of set-ups, laboratory experiment development, process modification/development, simulation, software development, integration of software (frontend-backend) and hardware, statistical data analysis, creating awareness in society/environment etc.
2	Students shall form a group of 3 to 4 students, while forming a group shall not be allowed less than three or more than four students, as it is a group activity.
3	Students should do survey and identify needs, which shall be converted into problem statement for mini project in consultation with faculty supervisor or head of department/internal committee of faculties.
4	Students shall submit an implementation plan in the form of Gantt/PERT/CPM chart, which will cover weekly activity of mini projects.
5	A logbook may be prepared by each group, wherein the group can record weekly work progress, guide/supervisor can verify and record notes/comments.
6	Faculty supervisors may give inputs to students during mini project activity; however, focus shall be on self-learning.
7	Students under the guidance of faculty supervisor shall convert the best solution into a working model using various components of their domain areas and demonstrate.
8	The solution to be validated with proper justification and report to be compiled in standard format of University of Mumbai. Software requirement specification (SRS) documents, research papers, competition certificates may be submitted as part of

	annexure to the report.
9	With the focus on self-learning, innovation, addressing societal/research/innovation problems and entrepreneurship quality development within the students through the Mini Projects, it is preferable that a single project of appropriate level and quality be carried out in two semesters by all the groups of the students. i.e. Mini Project 2 in semesters V and VI.
10	However, based on the individual students or group capability, with the mentor's recommendations, if the proposed Mini Project adhering to the qualitative aspects mentioned above, gets completed in odd semester, then that group can be allowed to work on the extension of the Mini Project with suitable improvements/modifications or a completely new project idea in even semester. This policy can be adopted on a case by case basis.

Term Work		
The review/ progress monitoring committee shall be constituted by the heads of departments of each institute. The progress of the mini project to be evaluated on a continuous basis, based on the SRS document submitted. minimum two reviews in each semester.		
In continuous assessment focus shall also be on each individual student, assessment based on individual's contribution in group activity, their understanding and response to questions.		
Distribution of Term work marks for both semesters shall be as below:		Marks 25
1	Marks awarded by guide/supervisor based on logbook	10
2	Marks awarded by review committee	10
3	Quality of Project report	05
Review / progress monitoring committee may consider following points for assessment based on either one year or half year project as mentioned in general guidelines		
One-year project:		
1	In one-year project (sem V and VI), first semester the entire theoretical solution shall be made ready, including components/system selection and cost analysis. Two reviews will be conducted based on a presentation given by a student group. ☐ First shall be for finalization of problem ☐ Second shall be on finalization of proposed solution of problem.	
2	In the second semester expected work shall be procurement of component's/systems, building of working prototype, testing and validation of results based on work completed in an earlier semester. ☐ First review is based on readiness of building working prototype to be conducted. ☐ Second review shall be based on poster presentation cum demonstration of working model in the last month of the said semester.	
Half-year project:		
1	In this case in one semester students' group shall complete project in all aspects including, ☐ Identification of need/problem ☐ Proposed final solution ☐ Procurement of components/systems ☐ Building prototype and testing	
2	Two reviews will be conducted for continuous assessment, ☐ First shall be for finalization of problem and proposed solution ☐ Second shall be for implementation and testing of solution.	

Mini Project shall be assessed based on following points	
1	Clarity of problem and quality of literature Survey for problem identification
2	Requirement Gathering via SRS/ Feasibility Study
3	Completeness of methodology implemented
4	Design, Analysis and Further Plan
5	Novelty, Originality or Innovativeness of project
6	Societal / Research impact
7	Effective use of skill set : Standard engineering practices and Project management standard
8	Contribution of an individual's as member or leader
9	Clarity in written and oral communication
10	Verification and validation of the solution/ Test Cases
11	Full functioning of working model as per stated requirements
12	Technical writing /competition/hackathon outcome being met

In one year project (sem V and VI), first semester evaluation may be based on first 10 criteria and remaining may be used for second semester evaluation of performance of students in mini projects.

In case of half year projects (completing in V sem) all criteria in generic may be considered for evaluation of performance of students in mini projects.

Guidelines for Assessment of Mini Project Practical/Oral Examination:	
1	Report should be prepared as per the guidelines issued by the University of Mumbai.
2	Mini Project shall be assessed through a presentation and demonstration of working model by the student project group to a panel of Internal and External Examiners preferably from industry or research organizations having experience of more than five years approved by the head of Institution.
3	Students shall be motivated to publish a paper/participate in competition based on the work in Conferences/students competitions.

Program Structure for Third Year Internet of Thing

Semester V & VI

UNIVERSITY OF MUMBAI

(With Effect from 2022-2023)

Semester VI

Course Objectives:

Sr. No.	Course Objectives
The course aims:	
1	To understand IoT Characteristics and Conceptual Framework.
2	To comprehend network architecture and design of IoT
3	To understand smart objects in IoT.
4	To correlate the connection of smart objects and IoT access technologies.
5	To explore network layer and application layer protocols for IoT.
6	To explore IoT security aspect.

Course Outcomes:

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On successful completion, of course, learner/student will be able to:		
1	Describe the IoT Characteristics and Conceptual Framework.	L1,L2
2	Differentiate between the levels of the IoT architectures.	L1,L2
3	Interpret sensor network and its components.	L1,L2
4	Analyze the IoT access technologies.	L1,L2,L3,L4
5	Illustrate various protocols at network layer and application layer for IoT.	L1,L2,L3
6	Analyze and evaluate security issues in IoT and risk analysis structure.	L1,L2,L3,L4

Prerequisite:

1. Python programming
2. C programming language
3. Computer Networks

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	CO Mapping
0	Prerequisite	ports, Timers ,Programming of controller , How to use IDE to write code of microcontroller, TCP-IP protocol stack	02	
I	Introduction to IoT	1.1 Introduction to IoT- Defining IoT, Characteristics of IoT, Conceptual Framework of IoT, Physical design of IoT, Logical design of IoT, Functional blocks of IoT, Communication models & APIs, Basics of networking Communication protocol, wireless sensor networks. 1.2 Convergence of IT and OT , IoT Challenges, IoT protocol vs Web Protocol stack Self-learning Topics: Hardware and software development tools for - Arduino, NodeMCU, ESP32, Raspberry Pi pico	04	CO1
II	IoT Network Architecture and Design	2.1 Drivers Behind New Network Architectures : Scale,Security,Constrained Devices and Networks ,Data,Legacy Device Support 2.2 Architecture : The IoT World Forum (IoTWF) Standardized Architecture :Layer 1-7, IT and OT Responsibilities in the IoT Reference Model,Additional IoT Reference Models, A Simplified IoT Architecture, The Core IoT Functional Stack ::Layer 1-3 , Analytics Versus Control Applications , Data Versus Network Analytics Data Analytics Versus Business Benefits , Smart Services, 2.3 IoT Data Management and Compute Stack :Fog Computing , Edge Computing ,The Hierarchy of Edge, Fog, and Cloud	06	CO2
III	Smart Objects IoT	3.1 Sensors, Actuators, and Smart Objects , Sensors , Actuators, 3.2 Micro-Electro-Mechanical Systems (MEMS) Smart Objects: A Definition , Trends in Smart Objects, 3.3 Sensor Networks , Wireless Sensor Networks (WSNs) , Communication Protocols for WSN,RFID ,NFC Self-learning Topics: RFID in Libraries	04	CO3
IV	Connecting Smart Objects	4.1 Communications Criteria : Range , Frequency Bands , Power Consumption , Topology , Constrained Devices , Constrained-Node Networks , Data Rate and Throughput , Latency and Determinism , Overhead and Payload , 4.2 IoT Access Technologies : Standardization and Alliances , Physical Layer , MAC Layer , Topology ,Security and Conclusion of IEEE 802.15.4 , IEEE 802.15.4g and 802.15.4e ,IEEE 1901.2a ,IEEE 802.11ah , LoRaWAN, and NB-IoT and Other LTE Variations , LTE Cat 0 , LTE-M, NB-IoT Self-learning Topics: case studies	08	CO4
V	IoT Network Layer and Application protocols	5.1 The Business Case for IP , The Key Advantages of Internet Protocol ,Adoption or Adaptation of the Internet Protocol ,The Need for Optimization ,Constrained Nodes , Constrained Networks IP Versions , Optimizing IP for IoT , 5.2 From 6LoWPAN to 6Lo, Header Compression, Fragmentation , Mesh Addressing ,Mesh-Under Versus Mesh-Over Routing , 6Lo Working Group , 6TiSCH , RPL , Objective Function Rank, RPL Headers ,Metrics , Authentication and Encryption on Constrained Nodes , ACE , DICE, Profiles and Compliances, Internet Protocol for Smart Objects Alliance ,Wi-SUN Alliance, Thread, IPv6 Ready Logo	08	CO5

		5.3 The Transport Layer , IoT Application Transport Methods,Generic Web-Based Protocols , 5.4 IoT Application Layer Protocols , CoAP, MQTT, AMQP Self-learning Topics: case studies		
VI	Securing IoT	6.1 A Brief History of OT Security Common Challenges in OT Security : Erosion of Network Architecture,Pervasive Legacy Systems,Insecure Operational Protocols like Modbus, DNP3 ,ICCP ,OPC , (IEC) Protocols,Device Insecurity 6.2 Security Knowledge: IT and OT Security Practices and Systems Vary, The Purdue Model for Control Hierarchy, OT Network Characteristics Impacting Security, Security Priorities: CIA, Security Focus 6.3 Formal Risk Analysis Structures: OCTAVE and FAIR, FAIRThe Phased Application of Security in an Operational Environment , Secured Network Infrastructure and Assets, Deploying Dedicated Security Appliances, Higher-Order Policy Convergence and Network Monitoring Self-learning Topics: OWASP IoT Top 10 attacks ,X.509, SSL & TSL basics	06	CO6

Assessment:

Internal Assessment (IA) for 20 marks:

- IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of syllabus content must be covered in First IA Test and remaining 40% to 50% of syllabus content must be covered in Second IA Test

➤ Question paper format

- Question Paper will comprise of a total of **six questions each carrying 20 marks**.Q.1 will be **compulsory** and should **cover maximum contents of the syllabus**
- **Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **four questions** need to be answered.

IoTC602	RFID and Microcontrollers	20	20	20	80	--	--	--	100

Course Objectives:

Sr. No.	Course Objectives
The course aims:	
1	To learn Basic knowledge of radio frequency identification technology.
2	To Learn and analyze technical problems related to RFID technology.
3	To conceptualize the basics of organizational and architectural issues of a Microcontroller.
4	To learn programming techniques used in Microcontrollers.
5	To emphasis on design of interfacing techniques of Microcontroller.
6	To understand the fundamentals of real time communication protocols.

Course Outcomes:

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On successful completion, of course, learner/student will be able to:		
1	Demonstrate the concepts of RFID systems, the operation of each component of the RFID system.	L1, L2
2.	Analyze the different RFID technology.	L3
3.	Describe the architecture of 8051 microcontroller.	L1,L2
4.	Implement assembly language programming for 8051 microcontroller.	L1,L2
5.	Analyze and design interfacing of peripheral devices with 8051 microcontroller.	L2,L3
6.	Examine different communication protocols required in embedded devices.	L1,L2

Prerequisite: Digital Logic & Computer Architecture, Microprocessor

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	CO Mapping
0	Prerequisite	Fundamentals of Computer Architecture and Microprocessor	02	
I	RFID Technology	Principle of RFID, components of RFID system: RFID tag, Reader, RFID architecture, RFID issues. Self-learning Topics: RFID middleware, concepts and technology: RFID, transponder.	05	CO1
II	RFID Applications	Introduction, RFID applications: logistics and supply chain, production, monitoring and maintenance, product safety, quality and information, access control and tracking and tracing of individuals, payment, loyalty, household etc . Hardware, Hardware issues, Collision resolution protocol: pure aloha, slotted aloha, frame slotted aloha, tree protocols, tree splitting algorithms, binary search algorithms, bitwise arbitration protocols. Main query tree protocols. Self-learning Topics: Near field Communication, Key study of Fast tag.	08	CO2
III	The Microcontroller Architecture	Introduction to 8051 Microcontroller, Architecture, Pin configuration, Memory organization, Input /Output Ports, Counter and Timers, Serial communication, Interrupts. Self-learning Topics: Darlington Pair (Current Amplifier ULN2803 IC), ARM 7 and ARM 9 architecture and Multi Core Processor.	06	CO3
IV	Assembly Language Programming of 8051	Instruction set, Addressing modes, Development tools, Assembler Directives, Programming based on Arithmetic & Logical operations, I/O parallel and serial ports, Timers & Counters, and ISR. Self-learning Topics: Programming of 8051 in 'C'.	08	CO4
V	Microcontroller Applications	Interfacing matrix keyboard and Seven segments LED display, LCD Interfacing, ADC Interfacing, DC motor interfacing. Self-learning Topics: NAND flash, NOR flash, eMMC, PMIC (Power Management IC), RAM Configuration.	05	CO5
VI	Communication Protocols and Interfaces	UART, I2C, SPI, RS232, RS485 Protocol, CAN Bus Interface, Capacitive Touch. Self-learning Topics: Modbus, Multi master I2C, and Daisy Chaining of SPI.	05	CO6

Course Objectives:

Sr. No.	Course Objectives
The course aims:	
1	To understand the digital evolution of web technology.
2	To learn TypeScript and understand how to use it in web applications.
3	To learn the fundamentals of Node.js.
4	To make Node.js applications using the express framework.
5	To enable the use of AngularJS to create web applications that depend on the Model-View-Controller Architecture.
6	To gain expertise in a leading document-oriented NoSQL database, designed for speed, scalability, and developer agility using MongoDB.

Course Outcomes:

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On successful completion, of course, learner/student will be able to:		
1	Understand the basic concepts related to web analytics and semantic web.	L1,L2
2	Understand how TypeScript can help you eliminate bugs in your code and enable you to scale your code.	L1,L2
3	Develop back-end applications using Node.js.	L1,L2,L3
4	Construct web based Node.js applications using Express.	L1,L2,L3
5	Understand AngularJs framework and build dynamic, responsive single-page web applications.	L1,L2,L3
6	Apply MongoDB for frontend and backend connectivity using REST API.	L1,L2,L3

Prerequisite: HTML5, CSS3, JavaScript.

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	CO Mapping
0	Prerequisite	Introduction to HTML5,CSS3, Basics of JavaScript	02	-
I	Introduction to WebX.0	Evolution of WebX.0; Web Analytics 2.0: Introduction to Web Analytics, Web Analytics 2.0, Clickstream Analysis, Strategy to choose your web analytics tool, Measuring the success of a website;	04	CO1

		Web3.0 and Semantic Web: Characteristics of Semantic Web, Components of Semantic Web, Semantic Web Stack, N-Triples and Turtle, Ontology, RDF and SPARQL Self-learning Topics: Semantic Web Vs AI, SPARQL Vs SQL.		
II	TypeScript	Overview, TypeScript Internal Architecture, TypeScript Environment Setup, TypeScript Types, variables and operators, Decision Making and loops, TypeScript Functions, TypeScript Classes and Objects, TypeScript Inheritance and Modules Self-learning Topics: Javascript Vs TypeScript	06	CO2
III	Node.js	Introducing the Node.js-to-Angular Stack (MEAN Stack), Environment setup for Node.js , First app, Asynchronous programming, Callback concept, Event loops, REPL, NPM, Event emitter, Buffers, Streams, Networking module, File system, Web module. Self-learning Topics: Node.js with MongoDB.	07	CO3
IV	Express	Introduction to Express ,Installing Express,Creating First Express application,The application, request, and response objects,Configuring Routes,Understanding Middleware,cookies, Session, Authentication Self-learning Topics: ExpressJs Templates	06	CO4
V	Introduction to AngularJS	Overview of AngularJS, Need of AngularJS in real websites, AngularJS modules, AngularJS built-in directives, AngularJS custom directives, AngularJS expressions,AngularJS Data Binding, AngularJS filters, AngularJS controllers, AngularJS scope, AngularJS dependency injection, AngularJS Services, Form Validation, Routing. Self-learning Topics: MVC model, DOM model.	07	CO5
VI	MongoDB and Building REST API using MongoDB	MongoDB: Understanding MongoDB, MongoDB Data Types, Administering User Accounts, Configuring Access Control, Adding the MongoDB Driver to Node.js, Connecting to MongoDB	07	CO6

		from Node.js, Accessing and Manipulating Databases, Manipulating MongoDB Documents from Node.js, Accessing MongoDB from Node.js, Using Mongoose for Structured Schema and Validation. REST API: Examining the rules of REST APIs, Evaluating API patterns, Handling typical CRUD functions (Create, Read, Update, Delete), Using Express and Mongoose to interact with MongoDB, Testing API endpoints. Self-learning Topics: MongoDB vs SQL Databases

Assessment:

Internal Assessment (IA) for 20 marks:

- IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of syllabus content must be covered in First IA Test and remaining 40% to 50% of syllabus content must be covered in Second IA Test

➤ Question paper format

- Question Paper will comprise of a total of **six questions each carrying 20 marks**. Q.1 will be **compulsory** and should **cover maximum contents of the syllabus**
- **Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **four questions** need to be answered

		Teaching Scheme (Contact Hours)			Credits Assigned			
Course Code	Course Name	Theory	Practical	Tutorial	Theory	Practical / Oral	Tutorial	Total
IoTL601	IoT Architecture and Protocols Lab	--	2	--	--	1	--	01

Course Code	Course Name	Examination Scheme						
		Theory Marks				Term Work	Practical/ Oral	Total
		Internal assessment			End Sem. Exam			
		Test1	Test 2	Avg. of 2 Tests				
IoTL601	IoT Architecture and Protocols Lab	--	--	--	--	25	25	50

Lab Objectives:

Sr. No.	Lab Objectives
The Lab aims:	
1	To Understand the definition and significance of the Internet of Things.
2	To Discuss the architecture, operation, and business benefits of an IoT solution.
3	To Examine the potential business opportunities that IoT can uncover.
4	To Explore the relationship between IoT, cloud computing, and Data Analytics.
5	To Identify how IoT differs from traditional data collection systems.
6	To Explore the interconnection and integration of the physical world and be able to design & develop IOT applications.

Lab Outcomes:

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On successful completion, of course, learner/student will be able to:		
1	Adapt different techniques for data acquisition using various IoT sensors for different applications.	L1,L2,L3
2	Demonstrate the working of actuators based on the collected data.	L1,L2,L3
3	Use different IoT simulators and correlate working of IoT protocols.	L1,L2,L3
4	Adapt different techniques for Integrating IoT services to other third-party Clouds.	L1,L2,L3
5	Execute data analysis and encryption methodologies for deployment of IoT applications.	L1,L2,L3,L4
6	Implement IoT protocols for communication to realize the revolution of internet in mobile devices, cloud and sensor networks.	L1,L2,L3,L4

Prerequisite:

1. Python programming
2. C programming language
3. Computer Networks

Hardware & Software Requirements:

Hardware Requirement: PC i3 processor and above. Arduino using Wifi/Raspberry Pi	Software requirement: Contiki, Cooja or any other simulator. AWS/Azure services. Internet Connection
--	---

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	LO Mapping
0	Prerequisite	Experimentation with Microprocessor and Microcontroller , Experimentation with python and c	02	
I	Arduino	Introduction to Arduino, Hardware requirements, Software requirements, Arduino Programming Language, Arduino Uno Wired & Wireless connectivity, LCD commands, Serial Communication commands. Program for blinking LED using Arduino. Traffic Light pattern using Arduino. ESP8266 WiFi Module	05	LO1, LO2
II	Raspberry Pi	Introduction to Raspberry Pi, Installation of NOOBS and Raspbian on SD card, Libraries on Raspberry Pi, getting static IP address of Raspberry Pi, Interfacing of Relay, DHT11, DC Motor and LCD with Raspberry Pi.	05	LO1,LO2
III	Contiki OS	Contiki OS : History of Contiki OS, Applications, Features, ,Communication Components in Contiki OS, Cooja simulator ,Running Cooja Simulator,	05	LO3
IV	Cooja Simulator	Using the Contiki OS with the Cooja simulator to program the IoT for broadcasting data from sensors	03	LO5,LO6
V	Protocols and Security with Cooja	Understanding of 6LowPAN , COAP and protocol implementation in Cooja . Encryption Decryption techniques for IoT	03	LO5,LO6
VI	IoT data to Cloud	Installing the Remote desktop server. Installation of Pi camera, Face recognition, serial peripheral interface using Raspberry Pi. . DHT11 data logger with ThingSpeak/ thingsboard/ AWS/ Azure server .	03	LO4,L06

4. <http://www.contiki-os.org/>
5. <https://www.bevywise.com/iot-simulator/>
6. <https://mqtt.org/>

List of Experiments.

1. To study and implement interfacing of different IoT sensors with Raspberry Pi pico/Arduino/NodeMCU.
2. To study and implement interfacing of actuators based on the data collected using IoT sensors. (like led switch ON/OFF, stepper motor)
3. To study and demonstrate Contiki OS for RPL (like Create 2 border router and 10 REST clients, Access border router from other network (Simulator))
4. To study and demonstrate working of 6LoWPAN in Contiki OS (simulator)
5. Write a program on Raspberry Pi to push and retrieve the data from cloud like thingspeak/thingsboard/AWS/ Azure etc
6. To study and implement IoT Data processing using Pandas.
7. Write a program on Arduino / Raspberry Pi subscribe to MQTT broker for temperature data and print it
8. Write a program to create TCP Server on Arduino/Raspberry Pi and respond with humidity data to TCP client when Requested
9. Write a program for ESP8266 DHT11/DHT22 Temperature and Humidity Web Server with Arduino IDE
10. Write a program to Control Your ESP8266 From Anywhere in the World
11. Write a program for Arduino / Raspberry Pi Publishing MQTT Messages to ESP8266
12. Write a program to collect data from sensor encrypt data send it to receiver (server) and decrypt it at receiving end Arduino/Raspberry Pi/ Contiki OS (simulator)

Term Work: Term Work shall consist of at least 10 practicals based on the above list. Also Term work Journal must include at least 2 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Oral Exam: An Oral exam will be held based on the above syllabus

		Teaching Scheme (Contact Hours)			Credits Assigned			
Course Code	Course Name	Theory	Practical	Tutorial	Theory	Practical & Oral	Tutorial	Total
IoTL602	RFID and Microcontrollers Lab	--	02	--	--	01	--	01

Course Code	Course Name	Examination Scheme						
		Theory Marks				Term Work	Practical / Oral	Total
		Internal assessment			End Sem. Exam			
		Test 1	Test 2	Avg. of 2 Tests				
IoTL602	RFID and Microcontrollers Lab	--	--	--	--	25	25	50

Lab Objectives:

Sr. No.	Lab Objectives
The Lab aims:	
1	To understand Basic knowledge of the radio frequency identification technology.
2	Get hands-on experience with Assembly Language Programming.
3	Realize techniques for faster execution of instructions and improve speed of operation and performance of Microcontroller.
4	Learn the techniques of serial communication and Timer/Counter programming of 8051 Microcontroller.
5	Study interfacing of peripheral devices with 8051 Microcontroller.
6	Become familiar with the MSP430F LaunchPad Development Kit.

Lab Outcomes:

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On successful completion, of course, learner/student will be able to:		
1	Developed simple application using RFID system.	L1, L2
2	Build a program on a microcontroller using arithmetic & logical instruction set of 8051.	L1,L2, L3
3	Develop the assembly level programming using 8051 Microcontroller loop instruction set.	L1, L2, L3
4	Write the assembly level programming using 8051 Microcontroller for Serial Port and Timer/Counter.	L1, L2,L3
5	Design interfacing of peripheral devices with 8051 Microcontroller.	L6
6	Demonstrate the significant features of the MSP430F LaunchPad development kit.	L1,L2

Prerequisite: Microprocessor

Hardware & Software Requirements:

Hardware Requirement: Arduino Uno, Raspberry Pi, MSP430F, NodeMCU	Software requirement: Arduino software (IDE), Python , C , Code Composer Studio
---	--

DETAIL SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	LO Mapping
I	Developing Application with RFID	1. RFID based Attendance System. 1. RFID based Car Parking System. 2. RFID based library Management System. (any One)	04	LO1
II	Arithmetic and Logical Instructions of 8051 Microcontroller	1. Program to add hex numbers in 8051 Assembly language. 2. Program to perform the logical operations in 8051 Assembly language.	04	LO2
III	Loop Instructions of 8051 Microcontroller	1. Program to find even & odd numbers from a given list of numbers in 8051 Assembly language. 2. Program to find maximum & minimum numbers from a given list of numbers in 8051 Assembly language. 3. Program to generate N numbers of Fibonacci series in 8051 Assembly language.	06	LO3
IV	Serial Port and Timer/Counter Programming of 8051 Microcontroller	1. Implementation of Serial Communication by using 8051 serial ports. 2. Assembly Language Program for use of Timer/Counter for various applications. (any One)	02	LO4
V	Interfacing with 8051 Microcontroller	1. Program to interface 8255 PPI with 8051 Microcontroller 2. Program to interface ADC 0808 with 8051 Microcontroller. 3. Program to interface DAC 0808 with 8051 Microcontroller. (any two)	05	LO5

VI	MSP430F LaunchPad development kit	1. To study microcontroller MSP430F with Capacitive touch booster 2. To study the MSP430F instruction set: data transfer instructions, arithmetic instructions, logic instructions, and the program control instructions. 3. Program to blink the onboard, RED LED and GREEN LED together using GPIO. (any two)	05	LO6
----	-----------------------------------	--	----	-----

Course Code	Course Name	Theory	Practical	Theory	Practical	
IoTL603	Wireless Sensor Technologies Lab	--	02	--	01	01

Course Code	Course Name	Examination Scheme							
		Theory Marks				Term Work	Practical/ Oral		Total
		Internal assessment			End Sem. Exam				
		Test1	Test 2	Avg. of 2 Tests					
IoTL603	Wireless Sensor Technologies Lab	--	--	--	--	25	25	--	50

Lab Objectives:

Sr No	Lab Objectives
	The Lab experiments aims:
1	Learn various communication technologies, Microcontroller boards and sensors.
2	Design the problem solution as per the requirement analysis done using sensors and wireless technologies.
3	Study the basic concepts of programming/sensors/ emulators.
4	Design and implement the mini project intended solution for project based learning.
5	Build, test and report the mini project successfully.
6	Improve the team building, communication and management skills of the students.

Lab Outcomes:

Sr. No.	Lab Outcomes	Cognitive Levels of Attainment as per Bloom's Taxonomy
	On successful completion, of course, learner/student will be able to:	

1	Differentiate between various wireless communication technologies based on the range of communication, cost, propagation delay, power and throughput.	L1,L2
2	Conduct a literature survey of sensors used in real world wireless applications.	L1,L2
3	Demonstrate the simulation of WSN using the Network Simulators (Contiki/ Tinker CAD/ Cup carbon etc).	L1,L2,L3
4	Demonstrate and build the project successfully by utilizing hardware /software , sensors, controller, coding, emulating and testing.	L1,L2,L3
5	Report and present the findings of the study conducted in the preferred domain.	L1,L2,L3
6	Demonstrate the ability to work in teams and manage the conduct of the research study.	L1,L2,L3

Prerequisite: Computer Networks, Microprocessor Lab.

Hardware & Software requirements:

Hardware Specifications:	Software Specifications:
1.Laptop/ PC with minimum 2GB RAM and 500 GB Hard disk drive. 2. Sensors –DHT11/22, PIR, MQ2/MQ3, HC-SR04, Moisture sensor , Image sensor, flow sensor, capacitive RH sensor, proximity detector, Arduino Uno/Mega board, RPi Board 3. Wireless Radio Modules- Bluetooth Module , Mobile Phone with Bluetooth antenna, Zigbee RF module, GSM Module 4. Others-Breadboard, wires, power supplies, USB cables, buzzers, LEDs, LCDs.	1. Windows or Linux Desktop OS Arduino IDE 2.XCTU configuration and test utility software 3. CupCarbon IOT simulator 4. Tinkercad Simulation Software 5. Contiki/Cooja 6. Any OS as per requirement(Emerald, Tiny OS, OSPM, MANTIS,EYES OS) 7. Internet connection

Guidelines: A. Students should perform experiments.

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	LO Mapping
0I	Prerequisite	Introduction to 8051, Basics of Wireless Communication and Python programming	02	
I	Review of Wireless Communication Technologies	Study of various wireless communication technologies like IEEE 802.15.1, IEEE 802.15.4 and IEEE 802.11. Mini Project: Allocation of the groups	02	LO1
II	Sensors and their Interfacing	Study of various types of sensors and display devices , DHT11/22,HC-SR04, MFRC 522, PIR, MQ2/MQ3, HC-SR04, Moisture sensor , Image sensor, flow sensor, capacitive RH sensor, proximity	02	LO2

		detector and demonstration of their interfacing using Arduino/ Raspberry pi. Mini Project: Topic selection		
III	Wireless Communication tools	Installation and testing the simulation tools (eg. TinkerCad/Cupcarbon/ContikiCooja). Mini Project: Topic validation and finalizing software and Hardware requirement.	02	LO3
IV	Implementation of Wireless Technologies	Study of interfacing of Arduino/ Raspberry pi with Wireless Technologies (eg. HC-05, XBee S2C by Digi, ESP controller). Mini Project: Hardware procurement	02	LO4
V	Remote Access	Study of interface using Mobile / Web to publish or remotely access the data on the Internet. Mini Project: Study of remote access technologies with respect to the selected project.	02	LO4
VI	Mini Project	Implementation of the Mini Project: 1. Design, configure, testing the Mini Project. 2. Report submission as per the guidelines.	14	LO4,LO5 ,LO6

B. Mini project

1. Students should carry out hardware based mini-project in a group of three/four students with a subject Incharge/ mini project mentor associated with each group.
2. The group should meet with the concerned faculty during laboratory hours and the progress of work discussed must be documented.
3. Each group should perform a detailed literature survey and formulate a problem statement.
4. Each group will identify the hardware and software requirement for their defined mini project problem statement.
5. Design, configure and test their own circuit board.
5. Interface using Mobile/Web to publish or remotely access the data on the Internet.
6. A detailed report is to be prepared as per guidelines.
7. Each group may present their work in various project competitions and paper presentations

B. Documentation of the Mini Project

The Mini Project Report can be made on following lines:

1. Abstract
2. Contents
3. List of figures and tables

4. Chapter-1 (Introduction, Literature survey, Problem definition, Objectives, Proposed Solution, Wireless Technology used)
5. Chapter-2 (System design/Block diagram, Flow chart, Circuit/Interfacing diagram, Hardware and Software requirements, cost estimation)
6. Chapter-3 (Implementation snapshots/figures with explanation, code, future directions)
7. Chapter-4 (Conclusion)
8. References

Term Work:

Term Work shall consist of Mini Project on above guidelines/syllabus. Also Term work must include at least 2 assignments and mini project report.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Mini Project) + 5 Marks (Assignments) + 5 Marks (Attendance)

Oral Exam: An Oral exam will be held based on the Mini Project and Presentation.

		Teaching Scheme (Contact Hours)			Credits Assigned			
Course Code	Course Name	Theory	Practical	Tutorial	Theory	Practical & Oral	Tutorial	Total
IoTL604	Web Lab	--	2	--	--	1	--	01

Course Code	Course Name	Examination Scheme						
		Theory Marks				Term Work	Practical/ Oral	Total
		Internal assessment			End Sem. Exam			
		Test1	Test 2	Avg. of 2 Tests				
IoTL604	Web Lab	--	--	--	--	25	25	50

Lab Objectives:

Sr No	Lab Objectives
1	To familiarize with Open Source Tools for Web Analytics and Semantic Web.
2	To familiarize with Programming in TypeScript for designing Web Applications.
3	To orient students for developing Node.js backend applications.
4	To orient students for developing Express applications.
5	To understand AngularJS Framework for Single Page Web Applications.
6	To use REST API and MongoDB for Frontend and Backend Connectivity.

Lab Outcomes:

Sr. No.	Lab Outcomes	Cognitive Levels of Attainment as per Bloom's Taxonomy
Upon Completion of the course the learner/student should be able to:		

1	Understand open source tools for web analytics and semantic web apps development and deployment.	L1, L2
2	Understand the basic concepts of TypeScript for designing web applications.	L1, L2, L3
3	Construct back-end applications using Node.js.	L1, L2,L3
4	Construct back end applications using Express.	L1, L2,L3
5	Implement Single Page Applications using AngularJS Framework.	L1, L2, L3
6	Develop REST web services using MongoDB.	L1, L2, L3

Prerequisite: HTML5,CSS3 and Basics of JavaScript

Hardware & Software requirements:

Hardware Specifications	Software Specifications
PC with following Configuration 1. Intel Core i3/i5/i7 2. 4 GB RAM 3. 500 GB Hard disk	Angular IDE, Visual Studio Code, Notepad++, Python Editors, MySQL, XAMPP, MongoDB, JDK

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	LO Mapping
I	Web Analytics & Semantic Web	Study Any 1 tool in each 1. Study web analytics using open source tools like Matomo, Open Web Analytics, AWStats, Countly, Plausible. 2. Study Semantic Web Open Source Tools like Apache TinkerPop, RDFLib, Apache Jena, Protégé, Sesame.	02	LO1
II	TypeScript	Perform Any 2 from the following 1. Small code snippets for programs like Hello World, Calculator using TypeScript. 2. Inheritance example using TypeScript 3. Access Modifiers example using TypeScript	04	LO2

		4. Building a Simple Website with TypeScript		
III	Node.js	Perform Any 2 from the following 1. Build Hello World App in Node.js 2. Stream and Buffer in Node.js 3. Modules in Node.js(Networking, File system, Web module)	06	LO3
IV	Express	Perform Any 2 from the following 1. Configuring Express Settings and creating Express application using request and response objects. 2. Build Express application by Sending and Receiving Cookies. 3. Create an Express application to implement sessions.	04	LO4
V	AngularJs	Perform Any 2 from the following 1. Create a simple HTML “Hello World” Project using AngularJS Framework and apply ng-controller, ng-model, expression and filters. 2. Implement a single page web application using AngularJS Framework including Services, Events, Validations (Create functions and add events, add HTML validators, using \$valid property of Angular, etc.) 3. Create an application for like Students Record using AngularJS.	04	LO5
VI	MongoDB and Building REST API using MongoDB	Perform Any 2 from the following 1. Connect MongoDB with Node.js and perform CRUD operations. 2. Build a RESTful API using MongoDB. 3. Build a TypeScript REST API using MongoDB.	06	LO6

Lab Objectives:

Sr. No.	Lab Objectives
The Lab aims:	

1	To get familiar with the basics of Flutter open-source UI software development kit.
2	To get familiar with the basics of Dart programming language.
3	To acquire knowledge and skills for creation of embedded mobile application.
4	To gain ability to develop location aware embedded mobile application.
5	To explore Firebase- a cloud hosted NoSQL database.
6	To make students familiar with testing and publishing of embedded mobile applications.

Lab Outcomes:

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On successful completion, of course, learner/student will be able to:		
1	Develop basic embedded mobile application using Dart.	L1,L2,L3
2	Develop basic embedded mobile application using Flutter.	L1,L2,L3
3	Develop advanced embedded mobile application using Dart and Flutter.	L1,L2,L3
4	Developed the feature for embedded mobile application to track the location of object GPS and Google map.	L1,L2,L3,L4
5	Demonstrate database connectivity for cloud hosted database.	L1,L2,L3,L4,L5
6	Demonstrate the ability to test and publish embedded mobile application.	L1,L2,L3,L4,L5,L6

Prerequisite:

1. Python programming
2. C programming language
3. Computer Networks

Hardware & Software Requirements:

Hardware Requirement:	Software requirement:
PC i3 processor and above IoT Sensor and Kit with Wifi/Bluetooth support	JDK 8 and above, Android studio, Flutter SDK, Internet Connection

List of Experiments.

Basics of flutter five experiments

1. Introduction to Dart Programming
2. Write a program to explore Widgets, Layouts, Gestures and State Management
3. Writing Android Specific Code
4. Write a program to explore Packages and Database
5. Write a program for Accessing REST API, Internationalization and Deployment of application

Using flutter (cross platform applications) implement any five experiments from given list

1. Using mobile app controlling light
2. GPS coordinate of phone and selfie to mark attendance
3. Read RFID card and detect the object
4. Read NFC card and detect the object
5. Read temperature value in the room using temperature measurement LM_35 sensor and display it in the mobile app in the form of a graph for a day to show temperature changes every after one hr
6. Read temperature value in the room using humidity measurement SY_HS 220 sensor and display it in the mobile app in the form of a graph for a day to show temperature changes every after one hr
7. Install a motion sensor on the door and track movement when door is open send alarm should to raise on phone

Note: Use Flutter for mobile application development and Bluetooth or Wi-Fi for IOT sensors communication

Term Work: Term Work shall consist of at least 10 to 12 practicals based on the above list. Also Term work Journal must include at least 2 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Oral Exam: An Oral exam will be held based on the above syllabus

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned

		Internal assessment			End Sem. Exam			
		Test1	Test 2	Avg.				
IoTM601	Mini Project :2B IoT & Mobile App Based.	--	--	--	--	25	25	50

Course Objectives

1. To acquaint with the process of identifying the needs and converting it into the problem.
2. To familiarize the process of solving the problem in a group.
3. To acquaint with the process of applying basic engineering fundamentals to attempt solutions to the problems.
4. To inculcate the process of self-learning and research.

Course Outcome: Learner will be able to...

1. Identify problems based on societal /research needs.
2. Apply Knowledge and skill to solve societal problems in a group.
3. Develop interpersonal skills to work as member of a group or leader.
4. Draw the proper inferences from available results through theoretical/ experimental/simulations.
5. Analyse the impact of solutions in societal and environmental context for sustainable development.
6. Use standard norms of engineering practices
7. Excel in written and oral communication.
8. Demonstrate capabilities of self-learning in a group, which leads to life long learning.
9. Demonstrate project management principles during project work.

Guidelines for Mini Project

- Students shall form a group of 3 to 4 students, while forming a group shall not be allowed less than three or more than four students, as it is a group activity.
- Students should do survey and identify needs, which shall be converted into problem statement for mini project in consultation with faculty supervisor/head of department/internal committee of faculties.
- Students shall submit implementation plan in the form of Gantt/PERT/CPM chart, which will cover weekly activity of mini project.
- A log book to be prepared by each group, wherein group can record weekly work progress, guide/supervisor can verify and record notes/comments.
- Faculty supervisor may give inputs to students during mini project activity; however, focus shall be on self-learning.
- Students in a group shall understand problem effectively, propose multiple solution and select best possible solution in consultation with guide/ supervisor.
- Students shall convert the best solution into working model using various components of their domain areas and demonstrate.
- The solution to be validated with proper justification and report to be compiled in standard format of University of Mumbai.
- With the focus on the self-learning, innovation, addressing societal problems and entrepreneurship quality development within the students through the Mini Projects, it is preferable that a single project of appropriate level and quality to be carried out in two semesters by all the groups of the students. i.e. Mini Project 1 in semester III and IV. Similarly, Mini Project 2 in semesters V and VI.
- However, based on the individual students or group capability, with the mentor's recommendations, if the proposed Mini Project adhering to the qualitative aspects mentioned above gets completed in odd semester, then that group can be allowed to work on the extension of the Mini Project with suitable improvements/modifications or a completely new project idea in even semester. This policy can be adopted on case by case basis.

Guidelines for Assessment of Mini Project:

Term Work

- The review/ progress monitoring committee shall be constituted by head of departments of each institute. The progress of mini project to be evaluated on continuous basis, minimum two reviews in each semester.
- In continuous assessment focus shall also be on each individual student, assessment based on individual's contribution in group activity, their understanding and response to questions.
- Distribution of Term work marks for both semesters shall be as below;
 - Marks awarded by guide/supervisor based on log book : 10
 - Marks awarded by review committee : 10
 - Quality of Project report : 05

Review/progress monitoring committee may consider following points for assessment based on either one year or half year project as mentioned in general guidelines.

One-year project:

- In first semester entire theoretical solution shall be ready, including components/system selection and cost analysis. Two reviews will be conducted based on presentation given by students group.
 - First shall be for finalisation of problem
 - Second shall be on finalisation of proposed solution of problem.
- In second semester expected work shall be procurement of component's/systems, building of working prototype, testing and validation of results based on work completed in an earlier semester.
 - First review is based on readiness of building working prototype to be conducted.
 - Second review shall be based on poster presentation cum demonstration of working model in last month of the said semester.

Half-year project:

- In this case in one semester students' group shall complete project in all aspects including,
 - Identification of need/problem
 - Proposed final solution
 - Procurement of components/systems
 - Building prototype and testing
- Two reviews will be conducted for continuous assessment,
 - First shall be for finalisation of problem and proposed solution
 - Second shall be for implementation and testing of solution.

Assessment criteria of Mini Project.

Mini Project shall be assessed based on following criteria;

1. Quality of survey/ need identification
 2. Clarity of Problem definition based on need.
 3. Innovativeness in solutions
 4. Feasibility of proposed problem solutions and selection of best solution
 5. Cost effectiveness
 6. Societal impact
 7. Innovativeness
 8. Cost effectiveness and Societal impact
 9. Full functioning of working model as per stated requirements
 10. Effective use of skill sets
 11. Effective use of standard engineering norms
 12. Contribution of an individual's as member or leader
 13. Clarity in written and oral communication
- In **one year, project**, first semester evaluation may be based on first six criteria's and remaining may be used for second semester evaluation of performance of students in mini project.
 - In case of **half year project** all criteria's in generic may be considered for evaluation of performance of students in mini project.

Guidelines for Assessment of Mini Project Practical/Oral Examination:

- Report should be prepared as per the guidelines issued by the University of Mumbai.
- Mini Project shall be assessed through a presentation and demonstration of working model by the student project group to a panel of Internal and External Examiners preferably from industry or research organisations having experience of more than five years approved by head of Institution.
- Students shall be motivated to publish a paper based on the work in Conferences/students competitions.

Mini Project shall be assessed based on following points;

1. Quality of problem and Clarity

2. Innovativeness in solutions
3. Cost effectiveness and Societal impact
4. Full functioning of working model as per stated requirements
5. Effective use of skill sets
6. Effective use of standard engineering norms
7. Contribution of an individual's as member or leader
8. Clarity in written and oral communication

IoTDLO6011	Enterprise Network Design	04	--		04	--	--	04

Course Code	Course Name	Examination Scheme						
		Theory Marks				Term Work	Practical/Oral	Total
		Internal assessment			End Sem. Exam			
		Test1	Test2	Avg. of two Tests				
IoTDLO6011	Enterprise Network Design	20	20	20	80	- -	- -	100

Course Objectives:

Sr. No.	Course Objectives
	The course aims:

1	To be familiarized with the methodologies and approaches of the network design for an enterprise network.
2	To understand the network hierarchy and use modular approach to network design for an enterprise network.
3	To understand the campus design and data center design considerations for designing an enterprise campus.
4	To study Enterprise Edge WAN Technologies and design a WAN using them.
5	Designing an IP addressing plan and selecting a Route protocol for an enterprise network.
6	To design enterprise network for given user requirements in an application.

Course Outcomes:

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On successful completion, of course, learner/student will be able to:		
1	Understand the customer requirements and Apply a Methodology to design a Network.	L1,L2,L3
2	Structure and Modularize the design for an enterprise network.	L6
3	Design Basic Campus and Data Center for an enterprise network.	L6
4	Design Remote Connectivity for an enterprise network.	L6
5	Design IP Addressing and Select suitable Routing Protocols for an enterprise network.	L6
6	Explain SDN and its functioning.	L4,L5

Pre-requisite: Computer Networks

DETAIL SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	CO Mapping
0	Pre-requisite	1. OSI Reference Model and TCP/IP Protocol Suite 2. Routing IP Addresses 3. Internetworking Devices	02	
I	Applying a Methodology to Network Design:	The Service Oriented Network Architecture, Network Design Methodology, Identifying Customer requirements, Characterizing the Existing Network and Sites, Using the Top- Down Approach to Network Design, The Design Implementation Process. Self-Learning Topics: Study the basic concepts of Top-down network design approach with real time application.	06	CO1
II	Structuring and Modularizing the Network:	Network Hierarchy, Using a Modular Approach to Network Design, Services Within Modular Networks, Network Management Protocol: SNMP. Self-Learning Topics: Study different type of NMP protocols.	05	CO2

III	Designing Basic Campus and Data Center Networks	Campus Design Considerations, Enterprise Campus Design, Enterprise Data Center Design Considerations. Self-Learning Topics: Real time case study on Enterprise Data Center.	06	CO3
IV	Designing Remote Connectivity	Enterprise Edge WAN Technologies, WAN Transport Technologies, WAN Design, Using WAN Technologies, Enterprise Edge WAN and MAN Considerations, Enterprise Branch and Teleworker Design . Self-Learning Topics: Case study on WAN design.	06	CO4
V	Designing IP Addressing in the Network and Selecting Routing Protocols	Designing an IP Addressing Plan, Introduction to IPv6, Routing Protocol Features, Routing Protocols for the Enterprise, Routing Protocol Deployment, Route Redistribution, Route Filtering, Route Summarization Self-Learning Topics: Study of different routing protocols for Enterprise design.	10	CO5
VI	Software Defined Network	Understanding SDN and Open Flow : SDN Architecture – SDN Building Blocks, OpenFlow messages – Controller to Switch, Symmetric and Asynchronous messages, Implementing OpenFlow Switch, OpenFlow controllers , POX and NOX. Self-Learning Topics: Case study on SDN.	04	CO6

Assessment:

Internal Assessment (IA) for 20 marks:

- IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of syllabus content must be covered in First IA Test and remaining 40% to 50% of syllabus content must be covered in Second IA Test

➤ Question paper format

- Question Paper will comprise of a total of **six questions each carrying 20 marks**. Q.1 will be **compulsory** and should **cover maximum contents of the syllabus**
- Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **four questions** need to be answered.

IoTDLO6012	Blockchain Technology	20	20	20	80	--	--	--	100

Course Objectives:

Sr.No	Course Objectives
1	To get acquainted with the concept of Distributed ledger system and Blockchain.
2	To learn the concepts of consensus and mining in Blockchain through the Bitcoin network.
3	To understand Ethereum and develop-deploy smart contracts using different tools and frameworks.
4	To understand permissioned Blockchain and explore Hyperledger Fabric.
5	To understand different types of crypto assets.
6	To apply Blockchain for different domains IOT, AI and Cyber Security.

Course Outcomes:

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On successful completion, of course, learner/student will be able to:		
1	Describe the basic concept of Blockchain and Distributed Ledger Technology.	L1,L2
2	Interpret the knowledge of the Bitcoin network, nodes, keys, wallets and transactions	L1,L2,L3
3	Implement smart contracts in Ethereum using different development frameworks.	L1,L2,L3
4	Develop applications in permissioned Hyperledger Fabric network.	L1,L2,L3
5	Interpret different Crypto assets and Crypto currencies	L1,L2,L3
6	Analyze the use of Blockchain with AI, IoT and Cyber Security using case studies.	L4,

Prerequisite: Cryptography and Distributed Systems**DETAILED SYLLABUS:**

Sr. No.	Module	Detailed Content	Hours	CO Mapping
0	Cryptography and Distributed Systems (prerequisite)	Hash functions, Public – Private keys, SHA, ECC, Digital signatures, Fundamental concepts of Distributed systems	02	—
I	Introduction to DLT and Blockchain	Distributed Ledger Technologies (DLTs) Introduction, Types of Blockchains Blockchain: Origin, Phases, Components Block in a Blockchain: Structure of a Block, Block Header Hash and Block Height, The Genesis Block, Linking Blocks in the Blockchain, Merkle Tree. Self-learning Topics: Blockchain Demo	04	CO1
II	Consensus and Mining	What is Bitcoin and the history of Bitcoin, Bitcoin Transactions, Bitcoin Concepts: keys, addresses and wallets, Bitcoin Transactions, validation of transactions, PoW consensus Bitcoin Network: Peer-to-Peer Network Architecture, Node Types and Roles, Incentive based Engineering, The Extended Bitcoin Network, Bitcoin Relay Networks, Network Discovery, Full Nodes, Exchanging “Inventory”, Simplified Payment Verification (SPV) Nodes, SPV Nodes and Privacy, Transaction Pools, Blockchain Forks Self-learning Topics: Study and compare different consensus algorithms like PoA, PoS, pBFT	08	CO2
III	Permissionless Blockchain: Ethereum	Components, Architecture of Ethereum, Miner and mining node, Ethereum virtual machine, Ether, Gas, Transactions, Accounts, Patricia Merkle Tree, Swarm, Whisper and IPFS, Ethash, End to end transaction in Ethereum, Smart Contracts: Smart Contract programming using solidity, Metamask (Ethereum Wallet), Setting up development environment, Use cases of Smart Contract, Smart Contracts: Opportunities and Risk. Smart Contract Deployment: Introduction to Truffle, Use of Remix and test networks for deployment Self-learning Topics: Smart contract development using Java or Python	10	CO3

IV	Permissioned Blockchain : Hyperledger Fabric	Introduction to Framework, Tools and Architecture of Hyperledger Fabric <u>Blockchain</u> . Components: Certificate Authority, Nodes, Chain codes, Channels, Consensus: Solo, Kafka, RAFT Designing Hyperledger Blockchain Self-learning Topics: Fundamentals of Hyperledger Composer	07	CO4
V	Crypto assets and Cryptocurrencies	ERC20 and ERC721 Tokens, comparison between ERC20 & ERC721, ICO, STO, Different Crypto currencies Self-learning Topics: Defi, Metaverse, Types of cryptocurrencies	04	CO5
VI	Blockchain Applications & case studies	Blockchain in IoT, AI , Cyber Security Self-learning Topics: Applications of Blockchain in various domains Education, Energy, Healthcare, real-estate, logistics, supply chain	04	CO6

Course Objectives:

Sr. No.	Course Objectives
The course aims:	
1	Understand and analyze the basics of Arduino and Raspberry Pi.
2	Define and understand architecture of IoT Gateway and Middleware Technologies.
3	Study of M2M interaction and Arduino based web communication.
4	Describe networking with RESTful API's.
5	Study and analyze various IoT protocols and IoT interactions.
6	Design IoT based applications like automated light controllers, sprinkler controllers.

Course Outcomes:

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On successful completion, of course, learner/student will be able to:		
1	Explain and design IoT based interfacing using Arduino and Raspberry Pi.	L1,L2
2	Describe and apply the knowledge of IoT gateway and configuring a self-signed certificate.	L1,L2
3	Apply the design considerations and requirements of IoT middleware.	L1,L2,L3
4	Understand the basics of microservices framework and web socket servers.	L1,L2
5	Understand the various types of IoT interactions and applying the knowledge to design automated controllers.	L1,L2
6	Apply concepts like networking with IoT protocols, applying QOS to messages and design the web-based client.	L1,L2,L3

Prerequisite: Basics of Internet of Things (IoT), Wireless technologies.

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	CO Mapping
0	Prerequisite	Basics of IoT, Objects in IOT, Identifier in the IOT, Technologies in IOT.	02	
I	Arduino and Raspberry Pi Basics	Introduction to Arduino, Arduino Uno Wired & Wireless connectivity. Introduction to Raspberry Pi, Installation of NOOBS and Raspbian on SD card, Libraries on Raspberry Pi, getting static IP address of Raspberry Pi, Installing Remote Desktop Server, Pi camera installation- Face recognition using Raspberry Pi and data logger with ThingSpeak server. Self-learning Topics: Study of Odroid, UDOO Bolt and Nvidia Jetson. To study ThingSpeak server in detail.	06	CO1
II	IOT Gateways	Overview and architecture of IOT Gateway, Functions of IOT Gateway, Examples and types of Gateways in IoT. Configuring Gateway and Gateway certificate. User interface- configuring an Agent. Configuring a self-signed certificate. Self-learning Topics: Study of different IoT Gateway	06	CO2

		devices and their features.		
III	IoT Middleware	Middleware architecture, IoT middleware design considerations and requirements. Resource discovery and management. Data management, context awareness, and event management. The service-oriented middleware (SOM). Agent-based middleware. Interfacing with Web services. Introduction to Temboo platform, Tweeting from an Arduino board. Automation with IFTTT, sending push and text message notifications. Self-learning Topics: Study of recent IoT middleware protocols like Redhat JBoss, Oracle Fusion Middleware and WSO2 Carbon	06	CO3
IV	Networking with RESTful APIs and Web Sockets	Introduction to Flask microservices framework, creating a RESTful APIs service with Flask-RESTful. Introduction to PWM, adding a RESTful APIs client web page. Creating a Web Socket Service with Flask-Socket IO. Comparing the RESTful API and Web Socket Servers. Self-learning Topics: Study of different REST API's and its design patterns.	06	CO4
V	Machine to Machine Interaction	Introduction and types of IoT interaction, Cloud M2M with IFTTT, M2M Alarm system, Automated light controller, sprinkler controller. Getting data from a web page, sending data to the cloud. Self-learning Topics: Study of applications of Cloud computing using IoT. Case study on deployment of IoT applications on cloud platform.	07	CO5
VI	Networking with MQTT	Introduction to MQTT with example. Publishing and Subscribing MQTT messages. Applying Quality of Service to messages. Controlling an LED with MQTT. Introduction to Web-based MQTT client. Self-learning Topics: Study of MQTT broker services, Python Paho-MQTT Client library. MQTT Callback and init method.	06	CO6

Course Objectives:

Sr. No.	Course Objectives
---------	-------------------

The course aims:	
1	Basics of cloud computing and its difference with respect to other types of computing's
2	Understand the meaning and the need for having virtualization.
3	Identify the different types of services offered by cloud.
4	Understand the administration and management of cloud services.
5	Identify the various types of securities that can be applied to the cloud.
6	Understand the current and the emerging trends in cloud computing.

Course Outcomes:

Sr. No.	Course Outcomes	Cognitive levels of attainment as per Bloom's Taxonomy
On successful completion, of course, learner/student will be able to:		
1	Differentiate between different cloud computing models.	L1,L2,L3
2	Implement the virtualization type as per the needs.	L1,L2,L3
3	Select the required cloud service as per the requirements.	L1,L2
4	Apply management strategies for cloud computing applications.	L1,L2,L3
5	Decide and apply the security measures in cloud computing.	L1,L2,L3
6	Understand current trends and apply their knowledge for the development of the new trends.	L1,L2,L3

Prerequisite: Computer Networks

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	CO Mapping
0	Prerequisites	LAN, WAN, MAN, Internetworking and networking devices, Working of OSI model for data transfer. Operating systems.	02	--
I	Introduction to Cloud Computing	Need for cloud, Cloud Computing and its components, Types of Cloud: NIST and Cloud Cube Models, Cloud Deployment Models and Service Models, Cloud Computing architecture, Characteristics of cloud, Uses of cloud, Advantages and disadvantages of cloud computing. Self-learning Topics: Client server architecture and peer to peer configuration, Ubiquitous computing, Utility computing, Grid computing, Edge computing.	08	CO1
II	Virtualization	Introduction to virtualization, Need for virtualization, Taxonomy of virtualization, Hypervisor and its types, Paravirtualization, Full virtualization, Implementation levels of virtualization, Virtualization and cloud computing Types of virtualizations - memory, CPU, I/O, OS and server virtualization. Virtualization technology: KVM, XEN, Vmware, HperV, QEMU Self-learning Topics: Datacenter virtualization, Storage virtualization, Sensor virtualization. Physical machine to virtual machine conversion	06	CO2
III	Cloud Computing services	Primary services with its layered representation, Secondary services such as Security as a Service, Identity management as a Service, Database as a Service, Storage as a Service, Collaboration as a Service, Compliance as a Service,	06	CO3

		Monitoring as a Service, Communication as a Service, Network as a service. Application as a service, Integration as service, Disaster recovery as a service, Analytics as a service and Backup as a service Self-learning Topics: Paas Providers, and SaaS providers, comparison of all the service providers		
IV	Cloud implementation and Management	Open stack cloud architecture, its features, Components and modes of operations. AAA Model, Cloud API. Disaster management and Capacity planning. SMB: problems of SMB in cloud adoption, Public cloud adoption phases for SMB, Cloud vendors and cloud providers roles and responsibilities Self-learning Topics: Cloud service management	06	CO4
V	Cloud Security	Host security (IaaS, PaaS, SaaS), Data security (challenges and types), Application security, Information security, Risk, attacks and vulnerabilities in cloud computing: reasons and types of risk, types of vulnerabilities, solution for risk and vulnerability Self-learning Topics: Secured cloud software testing, Legal matters in cloud security	06	CO5
VI	Trends in Cloud computing	Mobile cloud computing: Need of Mobile cloud computing, its components, Green cloud computing: its requirements Cloud data center, Media cloud, Application specific cloud, Groupware cloud and Intercloud. Self-learning Topics: Applications of mobile cloud computing and green cloud computing, Third party cloud service	05	CO6
